World's first mobile brain scanner with a Nokia N900

As human beings we're far more predictable than we like to admit, but even companies like Amazon are reduced to a best guess about what we might like to buy in the future based upon what we've already done in the past. Jacob Larsen says the mobile brain scanner offers a more "intense reading" giving a glimpse of what has until now been a closed world of thoughts and responses.

It is the glimpse into those reactions that alarms scientists like Jim Fallon, who showed psychopathic tendencies on his own brain scan. Should you be judged on your brain scan, or your behavior? What if you are a convicted pedophile whose brain continues to show responses to images of children, but you never act on those responses?

"There are many ethical issues related to brain imaging in general, and this is a new world," Jacob Larsen admits. "It's not clear what this information will do to a normal person. And we have no idea what the consequences of sharing this data will be. What will happen if we share our brain data on Facebook? What happens if people interpret this data now, or in the future?"

There's no doubt though that, like personal genetic testing, people, rather than doctors, will be able to access and control the most essential information relating to their own clinical make-up for the first time. We'll know what makes us tick, and for most doctors that is a terrifying reality.

"I can't imagine the average person using this information correctly. Even a medical student would get it wrong," says Jim Fallon. "There could be mayhem. When we scanned the brains of serial killers we had to send off the data and work with people to analyze it. Interpreting data is not a trivial task, and there are millions of questions about each scan. It's endless."

In truth it can mean everything, or nothing at all - so I try the device for myself.

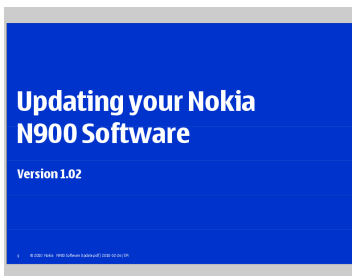

Jacob Larsen hands me the headset and tightens the sensors. After some adjustment a 3D image of my brain springs to life on the screen of the Nokia N900. Lifting my finger I can rotate it and see it change color. When I talk a part of my left frontal lobe turns yellow and throbs mildly. Then I laugh and a spodge of deep purple explodes in the deeper back recesses of my brain. What does this mean? As Jim Fallon predicted, I have no idea.
