

Master Lock 1500iD

Master Lock 1500iD Directional Combination Lock User Manual

Model: 1500iD

INTRODUCTION

The Master Lock 1500iD Directional Combination Lock provides security for various applications such as school lockers, gym lockers, and cabinets. This padlock features a durable metal body, a hardened steel shackle for resistance against cutting and sawing, and an anti-shim locking mechanism for enhanced security. Its patented directional movement technology allows for a personalized combination using up, down, left, and right movements, offering a convenient and secure locking solution.

SETUP: SETTING YOUR COMBINATION

Your Master Lock 1500iD comes with a factory-set combination. It is recommended to change this to a personal combination for improved security. Follow these steps to set your new directional combination:

1. **Place lock in the open position:** Ensure the shackle is open and the lock is disengaged.
2. **Locate the reset lever:** On the back of the lock, use a pointed object (e.g., a pen tip) to slide the reset lever into the "up" position (towards the "R" marking).
3. **Clear the mechanism:** Insert the shackle into the lock body and squeeze firmly twice. This action clears any previous settings.
4. **Open the lock:** Pull up on the shackle to open the lock again.
5. **Enter your new combination:** With the shackle open, enter your desired new directional combination using the up, down, left, or right movements on the dial. Ensure these movements are precise.
6. **Slide reset lever back:** Slide the reset lever back to the "down" position.

7. **Test the new combination:** Insert the shackle into the lock and squeeze firmly. Scramble the dial. Then, enter your new combination to verify it opens the lock.
8. **Lock is ready:** The lock will now open with your new combination. Remember your combination as there is no master key or override.

Dimensions

Image: A visual step-by-step guide illustrating the process of resetting the combination on the Master Lock 1500iD. It shows the lock in various stages of the reset procedure, from open to setting the new code.

OPERATING THE LOCK

Opening the Lock

1. Ensure the lock is in the closed position with the shackle engaged.
2. Enter your personalized directional combination by moving the central dial up, down, left, or right in the correct sequence.
3. After entering the combination, pull up on the shackle to release the lock.

Closing and Securing the Lock

1. Align the shackle with the opening in the lock body.

2. Push the shackle firmly into the lock body until it clicks into place.
3. Scramble the directional dial to secure the lock and prevent accidental opening.

Bright Colors Simplify Locker Identification

**Available in black, red, blue, & purple
(color randomly selected at time of shipment)**

MAINTENANCE

The Master Lock 1500iD is designed for indoor use. To ensure optimal performance and longevity:

- Keep the lock clean and free from dust and debris. Wipe with a soft, dry cloth.
- Avoid exposing the lock to harsh weather conditions, extreme temperatures, or moisture, as this can affect the internal mechanism.
- Do not apply excessive force when operating the lock or entering the combination.
- Lubrication is generally not required for this type of lock. If the mechanism feels stiff, consult Master Lock support before applying any lubricants.

TROUBLESHOOTING

Lock Does Not Open

- **Incorrect Combination:** Double-check that you are entering the correct directional sequence. Ensure each movement is distinct and fully registered.
- **Incomplete Combination Entry:** Make sure all steps of your combination are entered before attempting to open the lock.
- **Shackle Not Fully Engaged:** If the shackle was not fully pushed in when locking, it might not engage properly. Try pushing the shackle in firmly before re-entering the combination.
- **Internal Obstruction:** If the lock mechanism feels jammed, ensure no foreign objects are obstructing the shackle or dial.

Forgotten Combination

The Master Lock 1500iD is designed for user-set combinations and does not have a master key or a way to recover a forgotten combination. It is crucial to record your combination in a secure, memorable location. If the combination is forgotten, the lock may need to be replaced.
