2. SETUP AND INSTALLATION

Proper installation is crucial for the longevity and performance of your Swanstone shower base. It is highly recommended that installation be performed by a qualified professional. Always consult local building codes and plumbing regulations before beginning installation.

Installation Steps (General Guidelines):

1. **Prepare the Subfloor:** Ensure the subfloor is level, clean, and structurally sound. Any unevenness must be corrected prior to installation.
2. **Dry Fit:** Place the shower base in its intended position to verify fit and drain alignment. Mark the perimeter of the base on the subfloor.
3. **Mortar Bed Preparation:** A mortar bed is required to provide full support for the shower base and prevent flexing. Mix a suitable mortar according to manufacturer instructions and apply it evenly within the marked perimeter.
4. **Set the Base:** Carefully set the shower base into the wet mortar bed, ensuring the pre-installed Fit-Flo drain aligns with the plumbing. Apply firm, even pressure to ensure full contact with the mortar.
5. **Leveling:** Use a level to confirm the shower base is perfectly level in all directions. Adjust as necessary while the mortar is still workable.
6. **Drain Connection:** Connect the shower drain to the existing plumbing system, ensuring all connections are watertight.
7. **Curing Time:** Allow the mortar to cure completely as per the mortar manufacturer's recommendations before proceeding with wall installation or using the shower.
8. **Sealing:** Apply appropriate sealant around the perimeter of the shower base where it meets the wall and floor, as required.

Note: Detailed installation instructions may vary. Always refer to the specific installation guide provided with your product packaging for precise steps and safety precautions.

3. OPERATION

The Swanstone Solid Surface Shower Base is designed for standard showering use. Once properly installed and sealed, it provides a durable and safe surface for your daily shower routine. The pebbled surface offers enhanced slip resistance for user safety.

Ensure the drain is clear of debris to maintain proper water flow and prevent pooling. Regular cleaning, as outlined in the Maintenance section, will ensure optimal performance and appearance.

4. CARE AND MAINTENANCE

Maintaining your Swanstone shower base is simple due to its non-porous, solid surface material. Regular cleaning will preserve its appearance and hygiene.

General Cleaning:

- For routine cleaning, use a soft cloth or sponge with warm water and a mild, non-abrasive liquid cleaner.
- Rinse thoroughly with water after cleaning to remove all cleaner residue.
- Wipe the surface dry to prevent water spots and mineral buildup.

Stain Removal:

- For stubborn stains, a mild abrasive cleaner (e.g., Soft Scrub with Bleach) or a paste of baking soda and water can be used. Apply with a soft cloth and rub gently.
- For hard water spots or mineral deposits, use a solution of white vinegar and water. Allow it to sit for a few minutes before scrubbing and rinsing.
- Avoid using harsh chemicals, strong acids, or abrasive pads, as these can damage the surface finish.

Preventative Measures:

- Rinse the shower base after each use to wash away soap scum and residue.
- Ensure adequate ventilation in the bathroom to prevent mold and mildew growth.
- Do not place extremely hot items directly on the surface.

5. TROUBLESHOOTING

This section addresses common issues you might encounter with your shower base and provides potential solutions.

Problem	Possible Cause	Solution
Slow Drainage / Water Pooling	Drain clogged with hair or soap scum. Improper installation/leveling.	Remove drain cover and clear any obstructions. Use a drain snake if necessary. If newly installed, verify base is level. If issue persists, consult a professional plumber.
Surface Stains	Soap scum, hard water, or cosmetic product residue. Lack of regular cleaning.	Refer to the "Care and Maintenance" section for stain removal techniques. Establish a routine cleaning schedule.

Problem	Possible Cause	Solution
Unpleasant Odor from Drain	Buildup of organic matter in the drain.	Clean the drain thoroughly. Pour a mixture of baking soda and vinegar down the drain, followed by hot water.
	Dry P-trap (rare for shower drains in regular use).	Run water for a few minutes to fill the P-trap. If odor persists, consult a plumber.
