3. SETUP AND INSTALLATION

The Kyosho 11868-12 Hull is a primary structural component. Installation typically involves transferring or installing internal components into this hull.

1. **Preparation:** Unpack the hull carefully. Inspect for any shipping damage. Ensure all necessary tools and additional components (not included with the hull) are available.
2. **Component Transfer/Installation:**

- Carefully transfer or install the motor, steering servo, battery tray, and other electronic components into the new hull.
 - Ensure proper alignment and secure mounting of all internal parts according to your specific model's assembly instructions.
3. **Sealing:** If applicable, apply appropriate marine-grade sealant to ensure watertight integrity around shafts, wires, and access hatches. Allow adequate curing time as per sealant manufacturer's instructions.
 4. **Final Inspection:** Before proceeding, perform a thorough visual inspection to confirm all components are correctly installed and secured.

4. OPERATING CONSIDERATIONS

Once the hull is fully assembled with all necessary components, its operation is dictated by the complete model boat's design. The hull itself does not have operational controls.

- Always operate your model boat in suitable conditions and environments as specified in the main model's manual.
- Regularly check the hull for any signs of stress, cracks, or leaks after each use.
- Avoid impacts that could damage the hull's structural integrity.

5. MAINTENANCE

Proper maintenance extends the life of your Kyosho 11868-12 Hull.

- **Cleaning:** After each use, especially in saltwater, rinse the hull thoroughly with fresh water to remove salt, dirt, and debris. Use a soft cloth to wipe it clean.
- **Inspection:** Periodically inspect the hull for any signs of wear, cracks, or damage. Pay close attention to areas around mounting points and seams.
- **Storage:** Store the hull in a cool, dry place, away from direct sunlight and extreme temperatures. Avoid placing heavy objects on the hull during storage.
- **Repairs:** Minor scratches or dings can often be repaired with appropriate model-specific repair kits or epoxy. Consult a specialist for significant damage.
