2. Clear the work area and ensure adequate lighting.
3. Review your existing plumbing setup to ensure compatibility.

### 4.2 Valve Installation (Rough-in)

Install the shower valve body according to the manufacturer's instructions provided with the valve (valve sold separately). Ensure the valve is properly secured and plumb within the wall.

### 4.3 Trim Installation

1. Install the escutcheon plate over the valve body, securing it to the wall.
2. Attach the two handles to their respective hot and cold valve stems. Ensure they are oriented correctly for proper operation.
3. Secure the handles with the provided set screws.

### 4.4 Showerhead Installation

## 5. OPERATING INSTRUCTIONS

The Phylrich K3240\_015 Versailles Shower Set features two handles for precise control over water temperature and flow.

- **Cold Water Handle:** Turn the handle counter-clockwise to increase cold water flow.
- **Hot Water Handle:** Turn the handle counter-clockwise to increase hot water flow.
- Adjust both handles simultaneously to achieve your desired water temperature and flow rate.
- To turn off the water, rotate both handles clockwise until the water flow stops completely.

## 6. MAINTENANCE

Regular cleaning and maintenance will help preserve the finish and functionality of your shower set.

### 6.1 Cleaning the Finish

- Clean the shower set regularly with a soft, damp cloth.
- Avoid using abrasive cleaners, harsh chemicals, or scouring pads, as these can damage the finish.
- For stubborn spots, use a mild soap solution and rinse thoroughly with clean water, then dry with a soft cloth.

### 6.2 Showerhead Maintenance

- Periodically inspect the showerhead nozzles for mineral buildup.
- If mineral deposits are present, gently rub the rubber nozzles to dislodge them. For more severe buildup, the showerhead may need to be removed and soaked in a vinegar solution.

## 7. TROUBLESHOOTING

Refer to the following table for common issues and their solutions.

Problem	Possible Cause	Solution
Low Water Pressure	Partially closed shut-off valves; clogged showerhead; mineral buildup in pipes.	Ensure shut-off valves are fully open. Clean showerhead nozzles. Consult a plumber for pipe issues.
Leaking from Showerhead	Loose connection; damaged washer/gasket.	Tighten showerhead connection. Replace washer/gasket if damaged.
Leaking from Handles/Valve	Loose packing nut; worn O-rings or cartridges.	Tighten packing nut. Replace O-rings or cartridges as needed (consult a plumber).
