MAINTENANCE

Battery Replacement:

When your device shows signs of low power or stops functioning, it is time to replace the batteries. Always replace all batteries in a device simultaneously with new ones of the same type and brand for best results.

Cleaning Contacts:

Periodically inspect battery contacts in your devices. If you notice any dirt or corrosion, gently clean the contacts with a pencil eraser or a cotton swab dipped in rubbing alcohol. Ensure contacts are dry before reinserting batteries.

Disposal:

Dispose of used batteries according to local regulations. Many communities offer recycling programs for alkaline batteries. Do not dispose of batteries in fire.

TROUBLESHOOTING

Device Not Powering On:

- **Check Polarity:** Ensure batteries are inserted with the correct positive (+) and negative (-) orientation.
- **Verify Battery Life:** Replace old or depleted batteries with new ones.
- **Inspect Contacts:** Clean any corrosion or dirt from the battery and device contacts.

Short Battery Life:

- **Device Power Consumption:** Some devices naturally consume more power than others.
