**Always cross-reference the dimensions (365mm x 397mm) with your appliance's requirements.**

## INSTALLATION (SETUP)

---

Installing the wire shelf is a straightforward process. Ensure your oven or grill is cool and switched off before proceeding.

1. **Prepare the Appliance:** Open the oven or grill door. If replacing an old shelf, carefully remove it.
2. **Identify Shelf Runners:** Locate the shelf runners or grooves inside the oven/grill cavity where the shelf will slide in. These are typically on the side walls.
3. **Insert the Shelf:** Hold the new wire shelf horizontally. Carefully slide the shelf into the desired set of runners, ensuring it is level and fully inserted into the cavity.
4. **Verify Stability:** Gently push down on the shelf to ensure it is securely seated and stable before placing any items on it.

No tools are required for installation.

## OPERATING INSTRUCTIONS

---

Once installed, the wire shelf functions as a standard component within your oven or grill. It is designed to support cookware, baking trays, and food items during cooking or grilling processes.

- **Placement:** Position the shelf at the appropriate height within your oven or grill based on your recipe's requirements.
- **Loading:** Place food items or cookware evenly on the shelf to ensure balanced cooking and prevent tipping.
- **Heat Resistance:** The shelf is designed to withstand typical oven and grill temperatures.

Always use oven mitts when handling the shelf or items on it when the appliance is hot.

## CARE AND MAINTENANCE

---

Regular cleaning of your wire shelf will help maintain its condition and hygiene.

- **Daily Cleaning:** After each use, allow the shelf to cool. Wipe away any food spills or grease with a damp cloth and mild detergent.
- **Deep Cleaning:** For stubborn baked-on food, the shelf can be removed and soaked in warm, soapy water. Use a non-abrasive brush or sponge to scrub away residue.
- **Rinsing and Drying:** Rinse thoroughly with clean water and dry completely before re-inserting into the oven or grill to prevent water spots or rust.
- **Avoid Harsh Chemicals:** Do not use abrasive cleaners, steel wool, or harsh chemicals, as these can damage the shelf's finish.

## TROUBLESHOOTING

---

Most issues related to a wire shelf are simple to resolve.

Problem	Possible Cause	Solution
Shelf does not fit into the oven/grill.	Incorrect size or incompatible model.	Verify the dimensions (365mm x 397mm) against your appliance's requirements. Confirm your appliance model is listed as compatible. If not, this shelf is not suitable for your appliance.
Shelf is wobbly or unstable.	Not fully inserted into runners; damaged runners; incorrect shelf.	Ensure the shelf is fully pushed into the runners on both sides. Inspect the oven/grill runners for any damage. If the shelf is the correct size and runners are fine, contact appliance support.
Food residue is difficult to remove.	Baked-on food; insufficient cleaning.	Soak the shelf in warm, soapy water for several hours or overnight. Use a non-abrasive brush or sponge. For very stubborn stains, specialized oven cleaner (safe for metal surfaces) may be used, following product instructions carefully.
