## Haws 150-1-SAG

# Haws Handy Plastic Watering Can User Manual

Model: 150-1-SAG

## INTRODUCTION

---

Thank you for choosing the Haws Handy Plastic Watering Can. Haws has been a trusted name in watering equipment since 1886, known for balanced design and quality. This mini watering can is specifically designed for precise watering of indoor plants, succulents, orchids, African violets, and seedlings. Its compact size and thoughtful features ensure optimal plant care.

## SAFETY INFORMATION

---

- Keep out of reach of small children when filled with water to prevent spills or accidents.
- Do not use for storing or dispensing hazardous chemicals. This product is intended for water only.
- Avoid dropping the watering can, especially when full, to prevent damage to the product or surrounding items.

## COMPONENTS

---

Your Haws Handy Plastic Watering Can consists of the following main components:

- **Main Body:** The primary reservoir for water, with an integrated handle.
- **Long Spout:** Designed for precise water delivery.
- **Removable Brass-Faced Rose:** A sprinkler head that attaches to the end of the spout for a gentle, diffused spray.

Image: A detailed view of the watering can's spout, highlighting the removable brass-faced rose.

## SETUP

---

The Haws Handy Plastic Watering Can comes pre-assembled. The only setup required is attaching or detaching the brass-faced rose, depending on your watering needs.

1. **Attaching the Rose:** Gently push the brass-faced rose onto the end of the long spout until it is securely fitted. Ensure it is snug to prevent leakage.
2. **Detaching the Rose:** Gently pull the brass-faced rose off the end of the spout. It can be stored on the integrated holder on the spout for convenience.

## OPERATING INSTRUCTIONS

---

Using your Haws watering can is straightforward:

1. **Filling:** Fill the main body of the watering can with water through the top opening. The capacity is 0.7 liters (approximately 1 pint). Avoid overfilling to prevent spills during transport.
2. **Watering with Rose (Gentle Spray):** For delicate plants, seedlings, or when a diffused spray is desired, ensure the brass-faced rose is attached. Tilt the can forward to allow water to flow through the rose, providing a soft, even shower.
3. **Watering without Rose (Direct Stream):** For larger plants or when a direct stream of water is needed, remove the brass-faced rose. Tilt the can forward to deliver a precise stream of water directly to the plant's base.

Image: The watering can in action, demonstrating the gentle, consistent flow provided by the brass-faced rose, ideal for delicate plants.

## MAINTENANCE

To ensure the longevity and optimal performance of your Haws watering can:

- **Cleaning:** Rinse the watering can with clean water periodically to prevent mineral buildup, especially if using hard water. For stubborn deposits, a mild soap solution can be used, followed by thorough rinsing.
- **Storage:** Store the watering can in a cool, dry place when not in use. Avoid prolonged exposure to direct sunlight, which can degrade plastic over time.
- **Rose Care:** If the brass-faced rose becomes clogged, gently clean the holes with a small brush or needle to ensure an even spray.

## TROUBLESHOOTING

Problem	Possible Cause	Solution
Water leaks from rose attachment point.	Rose not securely attached or damaged.	Ensure the rose is pushed firmly onto the spout. Inspect the rose for cracks or damage; replace if necessary.
Uneven or weak spray from rose.	Holes in the rose are clogged.	Clean the holes of the brass-faced rose using a small brush or needle to remove debris or mineral buildup.
Water leaks from the bottom seam of the can.	Water left in can for extended periods; manufacturing defect.	Empty the can after each use. If persistent, contact customer support.

## SPECIFICATIONS
