Olympia U819 Porcelain Cream and Milk Jugs

Model: U819 | Capacity: 6 oz (Pack of 6)

1. Introduction

Thank you for choosing the Olympia U819 Porcelain Cream and Milk Jugs. This set of six 6 oz jugs is crafted from pure white, fully vitrified porcelain, designed for durability and versatility in various settings. These jugs feature strengthened rolled edges for chip resistance and are suitable for a wide range of temperatures, making them oven, microwave, dishwasher, and freezer proof. This manual provides essential information for the safe and effective use and maintenance of your new jugs.

2. Safety Information

Please read and understand all safety instructions before using the jugs. Retain this manual for future reference.

- **Handle with Care:** Although designed for chip resistance, porcelain can break if dropped or subjected to severe impact.
- **Temperature Extremes:** While the jugs are oven, microwave, and freezer safe, avoid sudden and extreme temperature changes (e.g., moving directly from a hot oven to a cold freezer) as this can cause thermal shock and breakage.
- **Hot Liquids:** Use caution when handling jugs containing hot liquids. The porcelain will retain heat. Always use the handle provided.
- **Inspection:** Before each use, inspect jugs for any chips, cracks, or damage. Do not use damaged jugs as they may break further and cause injury.
- **Children:** Keep out of reach of small children, especially when filled with hot liquids.

3. Setup and First Use

Before using your Olympia U819 jugs for the first time, follow these steps:

1. **Unpack:** Carefully remove all jugs from their packaging.
2. **Inspect:** Check each jug for any signs of damage that may have occurred during transit.
3. **Wash:** Wash all jugs thoroughly with warm, soapy water before initial use. Rinse completely and dry.

with a soft cloth.

4. Operating Instructions

The Olympia U819 jugs are designed for serving cream, milk, sauces, or other liquids. Their robust construction makes them suitable for various applications.

- **Filling:** Fill the jug with your desired liquid, ensuring not to overfill to prevent spills. The 6 oz capacity is ideal for individual servings or small groups.
- **Serving:** Use the integrated handle for a secure grip when pouring. The spout is designed for controlled pouring.
- **Heating/Cooling:** These jugs can be used in ovens and microwaves for heating contents, and in freezers for chilling. Always use oven mitts when removing from hot appliances.
- **Stackability:** The design allows for efficient storage by stacking multiple jugs, saving space in your cupboards or on shelves.

5. Maintenance and Cleaning

Proper care will ensure the longevity and pristine appearance of your Olympia U819 jugs.

- **Dishwasher Safe:** The jugs are fully dishwasher safe. Place them securely in the dishwasher to prevent movement and potential chipping during the wash cycle.
- **Hand Washing:** For hand washing, use warm water, a mild dish soap, and a non-abrasive sponge or cloth. Rinse thoroughly to remove all soap residue.
- **Stain Removal:** For stubborn stains, a paste of baking soda and water can be gently applied and left for a short period before washing. Avoid harsh abrasive cleaners or scouring pads, which can scratch the glaze.
- **Drying:** Dry immediately after washing to prevent water spots, especially in hard water areas.
- **Storage:** Store jugs in a dry place. Their stackable design helps optimize storage space.

6. Troubleshooting

Here are solutions to common concerns you might encounter:

- Chipping:** While designed with strengthened rolled edges, chipping can occur from impact. Always handle with care and avoid dropping or knocking against hard surfaces.
- Stains/Discoloration:** Porcelain is generally non-porous, but prolonged contact with certain highly pigmented foods or liquids can sometimes lead to faint staining. Refer to the "Stain Removal" section under Maintenance.
- Thermal Shock Breakage:** Cracks or breakage due to thermal shock happen when porcelain experiences rapid temperature changes. Always allow jugs to cool down or warm up gradually when transitioning between extreme temperatures (e.g., from freezer to hot oven).
- Water Spots:** These are typically caused by mineral deposits from hard water. Ensure jugs are dried immediately after washing, or use a rinse aid in your dishwasher.
