1. INTRODUCTION

The Sound Oasis SP-101 Pillow Speakers are designed to provide personal audio for relaxation, sleep, and sound therapy. These ultra-thin stereo speakers can be placed under your pillow, allowing you to listen to music or therapeutic sounds without disturbing others. The system includes two speakers, an integrated cable, and an in-line volume control for convenient use.

2. SETUP

Follow these steps to set up your Sound Oasis SP-101 Pillow Speakers:

1. **Unpack Components:** Carefully remove the two ultra-thin stereo speakers and the attached cable with in-line volume control from the packaging.
2. **Speaker Placement:** Position the two speakers under your pillow. For optimal stereo sound, place one speaker on each side of your head area. The ultra-thin design allows for comfortable placement under standard or king-sized pillows.
3. **Connect to Audio Source:** Plug the 1/8" (3.5mm) headphone jack into your desired audio device. Compatible devices include Sound Oasis sound therapy systems, MP3 players, CD players, smartphones, tablets, and TVs.

3. OPERATING INSTRUCTIONS

Using your Sound Oasis SP-101 Pillow Speakers is straightforward:

- **Volume Control:** The SP-101 features an in-line volume control located on the cable. Adjust the slider to increase or decrease the audio volume to your preferred level. Ensure the volume on your connected audio device is also set appropriately.
- **Audio Source Control:** Play, pause, or change tracks directly from your connected audio device (e.g., smartphone, MP3 player). The pillow speakers transmit the audio signal from your device.

4. MAINTENANCE

Proper care will ensure the longevity of your pillow speakers:

- **Cleaning:** Wipe the speaker surfaces with a soft, dry cloth. Do not use liquid cleaners or immerse the speakers in water.
- **Storage:** When not in use, store the speakers in a dry place. Avoid tangling the cables to prevent damage.
- **Cable Care:** Handle the cable gently. Avoid sharp bends or excessive pulling, which can damage internal wiring.

5. TROUBLESHOOTING

If you encounter issues with your SP-101 Pillow Speakers, refer to the following common solutions:

- **No Sound:**
 - Ensure the 3.5mm jack is fully inserted into the audio device.
 - Check the volume levels on both the in-line control and the connected audio device.
 - Verify the audio device is playing sound (e.g., test with standard headphones).
- **Low Volume:**
 - Increase volume using both the in-line control and the audio device.
 - Adjust speaker placement under the pillow; direct contact with the ear area can improve perceived volume.
 - Note that dense pillows, such as memory foam, may significantly reduce sound transmission.

- **Distorted Sound:**

- Reduce the volume on both the in-line control and the audio device.
- Ensure the cable is not damaged or kinked.

- **Speakers Sliding Under Pillow:**

- Adjust pillow position or consider using a pillowcase to help secure the speakers in place.

6. SPECIFICATIONS

Model	SP-101
Speaker Type	Ultra-thin stereo speakers
Connector	1/8" (3.5mm) headphone jack
Cable Length	Approximately 73 inches (185.4 cm)
Product Dimensions (each speaker)	4.96 x 2.48 x 0.79 inches
