8. TROUBLESHOOTING

If you encounter issues with your Melitta Cremio, refer to the following common solutions:

- **Appliance does not turn on:**
 - Ensure the power cord is securely plugged into a working outlet.
 - Check that the frother jug is correctly placed on the power base.
- **Milk is not frothing or foam is poor:**
 - Ensure you are using the correct whisk attachment for frothing.
 - Check that the milk level is between the MIN and MAX frothing lines. Overfilling or underfilling can affect foam quality.
 - Use cold milk, preferably with a fat content of 1.5% or higher for best results.
 - Ensure the whisk is clean and free from dried milk residue.
- **Milk is burning or sticking to the bottom:**

- Always ensure the jug is thoroughly cleaned after each use to prevent residue buildup.
- Do not exceed the maximum fill lines.
- **Appliance stops unexpectedly:**
 - The appliance has an automatic shut-off feature once the program is complete. This is normal operation.
 - If it stops prematurely, ensure there are no obstructions to the whisk's movement.
