tinyCam PRO

tinyCam PRO IP Camera Monitoring Application User Manual

Model: PRO

Brand: tinyCam

Introduction

tinyCam PRO is an advanced application designed for monitoring and managing IP cameras, DVRs, and NVRs. It provides a comprehensive solution for live video surveillance, recording, and motion detection directly from your Android device. This manual provides instructions for setting up, operating, maintaining, and troubleshooting the tinyCam PRO application.

Setup

1. Installation

Download and install the tinyCam PRO application from your device's official app store (e.g., Google Play Store). Ensure your device meets the minimum system requirements for the application.

2. Initial Launch and Permissions

Upon first launch, the application may request certain permissions, such as access to the camera, microphone, storage, and network. Grant all necessary permissions for full functionality. Denying permissions may limit the app's capabilities.

3. Adding Cameras

To add an IP camera:

1. Ensure your Android device is connected to the same local Wi-Fi network as your IP cameras.
2. Open tinyCam PRO and navigate to the camera management section (often indicated by a '+' icon or 'Manage Cameras').
3. **Automatic Scan:** Select the option to scan your local network for compatible cameras. The app will attempt to discover devices like Foscam, Swann, and other ONVIF-compliant cameras.
4. **Manual Addition:** If automatic scan fails or for specific configurations, select 'Add Camera Manually'. You will need to input the camera's IP address, port number, manufacturer/model, username, and password. Refer to your camera's documentation for these details.

5. After adding, test the connection to ensure the live feed is displayed correctly.

Note: For remote access outside your local network, additional network configuration (e.g., port forwarding on your router) may be required. Consult your router's manual or network administrator for assistance.

Operating

1. Live View

From the main screen, tap on a camera thumbnail to view its live feed. You can switch between single-camera view and multi-camera grid view to monitor several feeds simultaneously.

2. Camera Controls

- **Pan/Tilt/Zoom (PTZ):** If your camera supports PTZ, controls will appear on the live view screen. Use these to adjust the camera's direction and zoom level.
- **Recording:** Tap the record icon to manually start or stop video recording. Recorded footage is saved to your device's storage or a configured cloud service.
- **Audio:** Tap the speaker icon to listen to audio from the camera. If your camera supports two-way audio, a microphone icon will allow you to speak through the camera.
- **Snapshots:** Capture still images from the live feed using the snapshot icon.

3. Motion and Audio Detection

tinyCam PRO can be configured to detect motion or audio events. Navigate to the camera settings to enable and customize detection zones, sensitivity, and actions (e.g., start recording, send notifications, upload to cloud).

4. Playback

Access recorded footage through the 'Playback' or 'Recordings' section of the app. You can browse by date and time, and play back specific events.

Maintenance

1. App Updates

Regularly check for and install updates for tinyCam PRO from your app store. Updates often include bug fixes, performance improvements, and new features.

2. Storage Management

Monitor the storage space used by recorded videos and snapshots on your device. Configure automatic deletion policies or manually delete old footage to free up space.

3. Backup and Restore Settings

tinyCam PRO offers an export/import feature for camera settings. Utilize this to back up your configurations and restore them if you reinstall the app or switch devices.

Troubleshooting

- **Camera Not Found/Offline:**
    - Ensure the camera is powered on and connected to the network.
    - Verify your Android device is on the correct Wi-Fi network.
    - Check camera IP address, port, username, and password for accuracy.

    - Ensure no firewall settings on your router or camera are blocking the connection.
- **Video Lag/Poor Quality:**
    - Check your network bandwidth. A slow Wi-Fi or mobile data connection can cause lag.
    - Reduce the camera's video resolution or frame rate in its settings, if possible.
    - Ensure your device has sufficient processing power and memory.
- **App Crashing/Freezing:**
    - Clear the app's cache and data from your device's settings.
    - Ensure your device's operating system is up to date.
    - Reinstall the application.
    - *Note: Some devices, such as older Kindle Fire models, have reported compatibility issues.*
- **Remote Access Issues:**
    - Verify that port forwarding is correctly configured on your router for each camera.
    - Ensure your camera's external IP address or dynamic DNS (DDNS) service is correctly configured and updated.

Specifications

tinyCam PRO is an application for Android devices, offering:

- Multi-camera live viewing.
- Video recording (manual, scheduled, motion/audio triggered).
- Motion and audio detection with customizable alerts.
- Pan/Tilt/Zoom (PTZ) control for compatible cameras.
- Two-way audio support.
- Support for a wide range of IP camera brands and ONVIF standard.
- Secure access features (e.g., SSL, encrypted passwords).

Minimum requirements may vary; refer to the app store listing for the latest information.

Warranty

As a software application, tinyCam PRO does not come with a traditional hardware warranty. Its functionality is subject to the terms of service agreed upon during installation and is continuously improved through updates. The developer is committed to addressing bugs and providing functional updates.

Support

For technical assistance, bug reports, or feature requests, please visit the official tinyCam Monitor website or contact the developer directly through the contact information provided in the app store listing. You can also find a changelog and support resources at http://tinycammonitor.com/changelog.html.

Media Integration Note

No product images or official product videos were provided in the source data for embedding within this manual.

Quick Start Guide - iPhone & iPad

1. Download the "TinyCam Pro" app.
Scan the QR code to the left,
or visit www.minigadgets.com/tcpios
on your iPhone or iPad.

2. Power on your device, then connect to the device's Wi-Fi signal on your iPhone or iPad. Go to your Settings > Wi-Fi and connect to the the AIS_ signal being broadcasted (the below is an example of this signal)

AIS_728300
Unsecured Network

3. Once connected, open the TinyCam Pro app. Press the + button on the bottom and choose 'LAN Search'.
4. It should say "1 devices found'. Tap on the long string of numbers underneath this and it will load the camera's information in for you. Press on the 'Confirm' button.
• If this does not happen, please go to your iPhone or iPads Settings > Privacy > Local Network and make sure TinyCam Pro is enabled.
5. Your camera should say 'Online'. Tap the gear icon to the right.
6. Select the 'Wi-Fi Config' section.
7. Choose a wi-fi network to connect the device to. Enter the password at the top of the page and then choose the 'Next' button on the bottom.
• If your network is still not listed, move closer to the router.
• If the camera fails to connect, please retry and try moving the device closer to the router it is being paired to.
8. The device will have a progress circle and say 'In the connection...'
9. Once the circle reaches 100% it will turn into a green check mark and say 'Connection is successful'. Press on 'Finish'.
10. Your camera is now paired to your router and ready for remote viewing. Tap on the picture thumbnail to the left of where it says

Scan for instructional videos
• To reset your device, hold the reset button on the back in for 10 seconds and let go

Quick Start Guide - Android Devices

1. Download the "TinyCam Pro" app.
Scan the QR code to the left,
or visit www.universalgadgets.com/tcpdroid
on your android device.

2. Power on your device, then connect to the device's Wi-Fi signal on your phone. Go to your phone's Settings > Connections > Wi-Fi and select the AIS_ signal to join (the below is an example of that signal)

Current network
AIS_728300
Internet may not be available

3. Once connected, open the TinyCamPro app. Press the + button on the bottom and choose 'Add in LAN'.
4. It should say 'Found 1 Devices'. Tap on the long string of numbers underneath this and it will load the camera's information in for you. Press on the 'OK' button.
If this does not happen, please go to your phones Settings > Connections > Wi-Fi > Advanced and turn off 'Switch to mobile data', and then try again.

5. It should now be 'Online'. Tap the gear icon to the bottom right.

6. Select the 'Wi-Fi Config' section.

7. Choose a wi-fi network to connect the device to. Enter the password at the top of the page and then choose the 'OK' button on the bottom.
- *If your network is still not listed, move closer to the router.*
- *If the camera fails to connect, please retry and try moving the device closer to the router it is being paired to.*

8. The device will have a progress circle and say 'Connecting..'

9. Once the circle reaches 100% it will turn into a green check mark and say 'Connection is completed'. Press on 'OK'.

10. Your camera is now paired to your router and ready for remote viewing. Tap on the play button icon to enter the livestream.

Scan for instructional videos
- *To reset your device, hold the reset button on the back in for 10 seconds and let go*
