5. OPERATING INSTRUCTIONS

5.1 Preparing Edible Materials

For optimal cutting results, proper preparation of edible materials like fondant or gum paste is crucial. Roll the material to an even thickness. Many users find that chilling the material (e.g., in a freezer for 20-30 minutes) before cutting can improve precision and reduce stretching. Apply a thin layer of shortening to the cutting mat to help the material adhere without tearing.

5.2 Loading the Cutting Mat

1. Place your prepared edible material onto the adhesive surface of the cutting mat. Ensure it is smooth and free of air bubbles.
2. Align the cutting mat with the guides on the machine.
3. Press the "Load Mat" button (or equivalent) to feed the mat into the machine.

5.3 Selecting Designs and Settings

The Cricut Mini Cake machine allows for customization of cuts through various modes and functions. Refer to your cartridge's specific instructions for design selection.

- **Image Selection:** Use the cartridge's keypad or associated software (if applicable) to select your desired image.
- **Size Adjustment:** Images can be cut from 1.5 inches up to 11.5 inches. Adjust the size using the machine's

controls.

- **Mode Selection:** The machine features three modes and two functions for greater customization. These typically include options for speed, pressure, and multi-cut. Experiment with settings to find the optimal combination for your specific material.
- **Test Cut:** It is recommended to perform a small test cut on a scrap piece of material to verify settings before cutting your final design.

5.4 Executing the Cut

1. Once the mat is loaded and settings are confirmed, press the "Cut" button.
2. The machine will begin cutting the design. Do not interfere with the mat or blade during operation.
3. After the cut is complete, press the "Unload Mat" button to release the mat.
4. Carefully remove the cut design from the mat. Use a spatula or weeding tool if necessary to avoid damaging delicate cuts.

6. MAINTENANCE

6.1 Cleaning the Machine

- Always unplug the machine before cleaning.
- Wipe the exterior of the machine with a soft, damp cloth. Do not use abrasive cleaners or solvents.
- Periodically clean any debris from the blade housing and cutting area using a small brush or compressed air.

6.2 Cutting Mat Care

- After each use, gently scrape off any residual material from the cutting mat.
- To maintain adhesion, clean the mat with warm water and mild soap, then allow it to air dry completely.
- Store the mat with its protective cover to prevent dust and debris from accumulating.

6.3 Blade Replacement

Replace the cutting blade when you notice a decrease in cutting quality or if the blade appears dull or damaged. Refer to the blade replacement instructions provided with your replacement blades.
