Taco 110-24

Taco 110 Cast-Iron In-Line Circulator User Manual

Model: 110-24

INTRODUCTION

This manual provides essential information for the safe and efficient installation, operation, and maintenance of your Taco 110 Cast-Iron In-Line Circulator. Please read this manual thoroughly before attempting to install or operate the unit.

The Taco 110-24 is a 1/12 HP three-piece in-line circulator pump designed for residential and commercial applications, primary-secondary systems, and parallel pumping designs. It features a rugged motor and Bio Barrier protection for rotors and bearings.

SAFETY INFORMATION

Always observe basic safety precautions to reduce the risk of fire, electric shock, and personal injury.

- Ensure power is disconnected before installation or maintenance.
- Installation should be performed by a qualified professional.
- Wear appropriate personal protective equipment (PPE).
- Do not operate the pump if it is damaged.
- Refer to local codes and regulations for proper installation.

PRODUCT OVERVIEW

The Taco 110 Cast-Iron In-Line Circulator is engineered for reliable performance in various heating and cooling systems. Its robust design ensures longevity and quiet operation.

Image: Taco 110 Cast-Iron In-Line Circulator Pump. This image shows the green cast-iron pump body connected to the electric motor, with the inlet/outlet flanges visible.

Key Features:

- 1/12 HP Motor
- Three-piece in-line design
- Cast-iron construction
- Bio Barrier protection for rotors and bearings
- Suitable for residential and commercial applications

SETUP AND INSTALLATION

Proper installation is crucial for the optimal performance and longevity of the circulator pump.

Pre-Installation Checklist:

- Verify that the power supply matches the pump's requirements (110 Volts).
- Ensure adequate space for installation and future maintenance.
- Inspect the pump for any shipping damage.
- Gather necessary tools and materials (wrenches, pipe sealant, etc.).

Installation Steps:

1. **Isolate the System:** Turn off the main power to the heating/cooling system and close isolation valves to drain the section where the pump will be installed.
2. **Mount the Pump:** Install the circulator in the piping system. Ensure the flow direction arrow on the pump body aligns with the system's flow. The pump can be installed horizontally or vertically, but the motor should not be below the pump housing.
3. **Connect Piping:** Use appropriate fittings and pipe sealant to connect the pump to the system piping. Avoid overtightening.
4. **Electrical Connections:** Connect the pump to a dedicated electrical circuit according to local electrical codes. Ensure proper grounding. Refer to the wiring diagram on the motor housing.
5. **Fill and Vent:** Slowly refill the system, ensuring all air is purged from the pump and piping. Open any air vents.
6. **Check for Leaks:** Inspect all connections for leaks before restoring full power.

OPERATING INSTRUCTIONS

Once installed and the system is filled and vented, the circulator is ready for operation.

1. **Initial Start-up:** Restore power to the system. The pump should start operating. Listen for unusual noises.
2. **Monitor Performance:** Observe the system's heating/cooling performance. The circulator should operate smoothly and quietly.
3. **Continuous Operation:** The Taco 110 circulator is designed for continuous duty in appropriate applications.

Note:

- Do not run the pump dry. Ensure the system is always adequately filled with fluid.
- The pump is designed to circulate water or water/glycol solutions. Do not use with other fluids without consulting the manufacturer.

MAINTENANCE

Regular maintenance ensures the longevity and efficient operation of your circulator pump.

Annual Maintenance:

- **Lubrication:** The motor may require periodic lubrication. Refer to the motor label for specific lubrication instructions and frequency.
- **Inspect for Leaks:** Check all pipe connections and the pump housing for any signs of leaks.
- **Check for Noise/Vibration:** Listen for any unusual noises or excessive vibration, which could indicate a problem.
- **System Fluid Quality:** Ensure the system fluid is clean and free of debris.

Disassembly and Reassembly (for qualified personnel only):

The three-piece design allows for easy servicing of the motor and impeller assembly without disturbing the piping. Consult a qualified technician for internal component maintenance.

TROUBLESHOOTING

This section provides solutions to common issues you might encounter.

Problem	Possible Cause	Solution
Pump does not start	No power; tripped breaker; faulty wiring; seized motor.	Check power supply and breaker. Verify wiring. Consult a technician if motor is seized.
Pump runs but no flow	Air in system; closed valves; clogged impeller.	Vent air from system. Open all isolation valves. Inspect impeller for obstructions.
Excessive noise or vibration	Air in system; cavitation; worn bearings; improper mounting.	Vent air. Ensure adequate system pressure. Check mounting. Consult technician for worn bearings.
Leaking from pump	Loose connections; worn seals.	Tighten connections. Replace seals if necessary (professional service recommended).

SPECIFICATIONS

Detailed technical specifications for the Taco 110-24 Circulator Pump.

- **Model:** 110-24
- **Part Number:** 110-24S (also referred to as 110)
- **Horsepower:** 0.0833 HP (1/12 HP)
- **Voltage:** 110 Volts
- **Wattage:** 200 watts
- **Material:** Cast-Iron (Pump Body), Bronze (Finish/Material)
- **Item Weight:** 10.84 pounds
- **Product Dimensions:** 1 x 1 x 1 inches (Note: These dimensions may be indicative and not represent the full physical size.)
- **Manufacturer:** TACO

WARRANTY AND SUPPORT

For warranty information and technical support, please contact Taco customer service or visit their official website. Keep your purchase receipt as proof of purchase.

Manufacturer: Taco

Water Circulation Pumps & Circulators

In-Line Circulators

Taco In-Line Circulators are designed to efficiently circulate heated or chilled water in residential or light commercial hydraulic systems. These circulators may also be used for moving large quantities and are available in bronze or stainless steel construction for domestic hot water applications.

In-Line Circulators demonstrate proven performance, dependability, quiet operation and long lasting performance.

Water Circulation Pumps & Circulators

In-Line Circulators

Taco In-Line Circulators are designed to efficiently circulate heated or chilled water in residential or light commercial hydronic systems. These circulators may also be used for zoning large installations and are available in bronze or stainless steel construction for domestic hot water applications.

In-Line Circulators demonstrate proven performance, dependability, quiet operation and long term performance.
