ERB 19752 Americana Wildlands Full Brim Hard Hat

INSTRUCTION MANUAL

Introduction

Thank you for choosing the ERB 19752 Americana Wildlands Full Brim Hard Hat. This hard hat is designed to provide reliable head protection in various work environments, particularly those requiring protection from sun and rain. It features a durable construction and an adjustable suspension system for a secure and comfortable fit. Please read this manual thoroughly before using your hard hat to ensure proper fit, maintenance, and safety.

Safety Information

Your safety is paramount. This hard hat meets or exceeds the following standards:

- **ANSI/ISEA Z89.1-2009 Type 1, Class C, E and G**

Important Safety Guidelines:

- Always inspect the hard hat for damage (cracks, dents, discoloration, or signs of impact) before each use. Do not use a damaged hard hat.
- Never modify or alter the hard hat, its shell, or its suspension system. This can compromise its protective capabilities.
- Ensure the hard hat fits snugly and comfortably on your head. A loose hard hat may not provide adequate protection.
- Replace the hard hat immediately if it has sustained an impact, even if no visible damage is apparent.
- Store the hard hat away from direct sunlight, extreme temperatures, and chemicals that could degrade the material.

Components

The ERB 19752 Americana Wildlands Full Brim Hard Hat consists of the following key components:

- **Outer Shell:** The rigid, full-brim yellow plastic shell designed to deflect impacts and provide protection from sun and rain.
- **Suspension System:** A 4-point woven nylon suspension system that absorbs impact energy and keeps the shell

away from the wearer's head.

- **Mega Ratchet Adjustment:** A rear-mounted ratchet mechanism for quick and easy size adjustment.
- **Chin Strap (Optional/Included):** A strap to secure the hard hat under the chin for added stability.

Figure 1: The ERB 19752 Americana Wildlands Full Brim Hard Hat. This image shows the exterior of the yellow hard hat with its full brim and reflective strips, alongside an inverted view revealing the internal 4-point woven nylon suspension system and the Mega Ratchet adjustment mechanism.

Setup

Proper adjustment of your hard hat is crucial for comfort and protection.

1. **Inspect Components:** Before first use, ensure all components (shell, suspension, ratchet) are present and undamaged.
2. **Adjust Suspension:** The 4-point woven nylon suspension should be properly seated within the hard hat shell. Ensure the front of the suspension aligns with the front of the hard hat.
3. **Adjust Head Size:** Place the hard hat on your head. Use the Mega Ratchet adjustment knob located at the back of the hard hat to tighten or loosen the fit. Turn the knob clockwise to tighten and counter-clockwise to loosen. Adjust until the hard hat feels snug but comfortable, without causing pressure points. This hard hat adjusts for head sizes from 6-1/2 to 8.
4. **Check Fit:** The hard hat should sit level on your head and not easily shift when you move your head. It should not obstruct your vision.

Operating

Once properly adjusted, the hard hat is ready for use. Always wear the hard hat in environments where head protection is required or recommended.

- Ensure the hard hat is worn correctly, with the brim facing forward, providing maximum protection from overhead hazards, sun, and rain.
- Do not wear anything under the hard hat that could interfere with its fit or protective function, such as baseball caps or hoodies, unless specifically designed to be worn with hard hats and approved by the manufacturer.

Maintenance

Regular maintenance extends the life of your hard hat and ensures its continued protective capability.

- **Cleaning:** Clean the hard hat shell and suspension system regularly with mild soap and warm water. Rinse thoroughly and air dry. Avoid using abrasive cleaners, solvents, or harsh chemicals, as these can damage the material.
- **Inspection:** Perform a visual inspection before each use. Look for:
 - Cracks, dents, gouges, or punctures on the shell.
 - Fraying, tearing, or damage to the suspension straps.
 - Damage to the ratchet mechanism.
 - Any signs of heat damage, chemical exposure, or excessive wear.
- **Replacement:** Replace the hard hat immediately if any damage is found or if it has sustained an impact. Even if no visible damage is present, an impact can compromise the structural integrity. The typical service life of a hard hat is 2-5 years from the manufacturing date, depending on usage and environmental conditions. The suspension system should generally be replaced more frequently, typically every 12 months.
- **Storage:** Store the hard hat in a cool, dry place away from direct sunlight, extreme temperatures, and corrosive chemicals.

Troubleshooting

If you encounter issues with your hard hat, consider the following:

- **Hard Hat Feels Loose:**

Ensure the Mega Ratchet is tightened sufficiently. If the suspension is old or stretched, it may need replacement.
- **Hard Hat Feels Uncomfortable or Causes Pressure Points:**

Loosen the Mega Ratchet slightly. Ensure the suspension system is properly seated and not twisted. Verify that the hard hat size (6-1/2 to 8) is appropriate for your head. If discomfort persists, the hard hat may not be the correct fit for your head shape.
- **Hard Hat Shifts During Movement:**

Tighten the Mega Ratchet. If equipped, ensure the chin strap is properly adjusted and secured. The suspension may need adjustment or replacement if it no longer holds the hard hat securely.

Specifications

Feature	Detail
Brand	Delta Plus

Feature	Detail
Model Name	Americana Wildlands MRT Full Brim
Item Model Number	19752
Style	Americana Hard Hat (Full Brim)
Color	Yellow
Material	Plastic Nylon
