2. **Adjust Mic Gain:** Rotate the Mic Gain dial on the side of the unit to set the input level. Monitor the level meters on the LCD display to avoid clipping (distortion). Aim for peak levels around -12dB to -6dB.
3. **Start Recording:** Press the red RECORD button once. The recording indicator will illuminate, and the time counter will begin.
4. **Stop Recording:** Press the red RECORD button again. The recording will stop, and the file will be saved.

5. RECORDING MODES

The H2n offers multiple microphone configurations to suit various recording scenarios.

- **MS (Mid-Side) Stereo:** This mode uses a forward-facing 'Mid' microphone and a side-facing 'Side' microphone. It allows for adjustable stereo width after recording, providing flexibility in post-production. Ideal for capturing ambient sounds or music with a sense of space.
- **XY Stereo:** This configuration uses two unidirectional microphones positioned at a 90-degree angle. It provides a natural and realistic stereo image with excellent depth and localization. Suitable for recording live performances, interviews, or acoustic instruments.
- **2-Channel Mode:** Records a standard stereo file using either the MS or XY microphone configuration.
- **4-Channel Mode:** Simultaneously records both the MS and XY microphone signals as separate stereo pairs. This allows for advanced mixing and sound design possibilities, including creating immersive surround sound.

6. PLAYBACK AND FILE MANAGEMENT

6.1 Playback

1. Press the PLAY/PAUSE button to enter playback mode.
2. Use the navigation buttons to select a file.
3. Press PLAY/PAUSE again to start playback.

Problem	Possible Cause / Solution
Unit does not power on.	Check battery installation and charge level. Ensure the Power/Hold switch is not in the 'HOLD' position.
No sound during recording or playback.	Verify microphone gain settings. Check headphone/line out connections and volume levels. Ensure a microSD card is inserted and formatted.
Recording sounds distorted or too quiet.	Adjust the Mic Gain dial. If distorted, reduce gain. If too quiet, increase gain. Ensure input levels are within the optimal range (-12dB to -6dB).
Cannot transfer files to computer.	Ensure the H2n is connected via USB and "Storage" mode is selected. Try a different USB port or cable.
MicroSD card error.	Reformat the microSD card using the H2n's menu (this will erase all data). Try a different microSD card.
