

Corning 3591

Corning 3591 Polystyrene Flat Bottom 96 Well Microplate User Manual

MODEL: 3591 | BRAND: CORNING

1. Introduction

This manual provides essential information for the proper use and handling of the Corning 3591 Polystyrene Flat Bottom 96 Well Not Treated EIA/RIA Clear Microplate. Adhering to these instructions will help ensure optimal performance and reliable experimental results.

2. Product Overview

The Corning 3591 microplate is a 96-well, flat-bottomed plate constructed from clear polystyrene. It features a 'not treated' (medium binding) surface, which is hydrophobic and facilitates biomolecule binding primarily through passive interactions. This design makes it suitable for applications requiring the immobilization of large molecules, such as antibodies, that possess significant hydrophobic regions.

Each microplate is individually wrapped and conforms to standard microplate footprint and dimensions. Lids are available separately.

Figure 1: An image showing the clear, flat-bottomed 96-well polystyrene microplate. The wells are arranged in an 8x12 grid, with alphanumeric labels along the edges for identification.

3. Setup

The Corning 3591 microplate is supplied non-sterile. For applications requiring sterile conditions, appropriate sterilization procedures must be followed by the user, or a sterile product variant should be selected. Prior to use, ensure the microplate is at room temperature and free from any visible damage or contamination. Handle the microplate by the edges to avoid touching the well surfaces.

This microplate is designed to be compatible with standard laboratory equipment for 96-well plates, including plate readers, washers, and automated liquid handling systems.

4. Operating Instructions

The 'not treated' polystyrene surface is hydrophobic and binds biomolecules through passive interactions. This surface is particularly effective for the immobilization of large molecules, such as antibodies, which have large hydrophobic regions capable of interacting with the plate surface.

- **Recommended Working Volume:** The recommended working volume for each well is 75 to 200 μL . The total

well volume is 360 µL.

- **Binding Capacity:** The approximate binding capacity for this surface is 250 ng of mouse IgG per square centimeter.
- **Experimental Protocols:** Follow established laboratory protocols for your specific EIA/RIA or other assays. Optimize reagent concentrations, incubation times, and washing steps according to your experimental requirements.

5. Maintenance

The Corning 3591 microplate is a single-use, disposable product. It is not intended for cleaning or reuse. Proper storage before use is crucial to maintain product integrity:

- Store in a clean, dry environment at room temperature.
- Keep the individually wrapped plates sealed until ready for use to prevent contamination.

Dispose of used microplates according to laboratory waste disposal guidelines and local regulations, especially if they contain biohazardous materials.

6. Troubleshooting

Issues encountered during experiments using microplates are typically related to experimental design, reagent quality, or procedural errors rather than the physical integrity of the plate itself. If unexpected results occur, consider the following:

- **Inconsistent Binding:** Verify reagent concentrations, incubation temperatures, and times. Ensure proper mixing and consistent pipetting techniques.
- **High Background:** Optimize washing steps, blocking buffer composition, and antibody concentrations.
- **Low Signal:** Check reagent activity, ensure proper coating conditions, and confirm detector functionality.

For specific concerns regarding the microplate's manufacturing quality, refer to the support section.

7. Specifications

Brand	Corning
Model Number	3591
Material	Polystyrene
Plate Format	96-Well
Well Bottom	Flat
Well Shape	Round
Plate Color	Clear
Surface Treatment	Not Treated (Medium Binding)
Total Well Volume	360 µL
Recommended Working Volume	75 to 200 µL

Binding Capacity (Mouse IgG)	Approx. 250 ng/sq cm
Sterility	Non-sterile
Packaging	Individually Wrapped
Package Dimensions	21.4 x 9 x 7.4 inches
Package Weight	7.35 Pounds (Case of 50)
ASIN	B005J0KPHE

8. Warranty Information

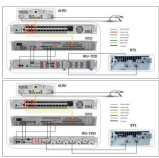

Specific warranty details for the Corning 3591 microplate are not provided in the product information. For warranty inquiries, please contact Corning Life Sciences directly.

9. Support

For technical assistance, product inquiries, or to request certification results for a specific lot, please contact Corning Life Sciences. Contact information can typically be found on the official Corning website or product packaging.

METHOCARBAMOL- methocarbamol tablets tablet, coated
RPK Pharmaceuticals, Inc.

Methocarbamol Tablets

Rx Only

DESCRIPTION

Methocarbamol tablet, USP, a carbamate derivative of guaifenesin, is a central nervous system (CNS) depressant with sedative and muscle relaxant properties.

The chemical name of methocarbamol is 1,2-Propandiol 3-(2-methoxyphenoxy)-1-Carbamate (s)- (or) (s)- 3-(2-methoxyphenoxy)-1,2-Propandiol 1-Carbamate and has the empirical formula C₁₁H₁₅NO₅ & its molecular weight is 241.26g/mol. The structural formula is shown below.

Methocarbamol is a white powder, sparingly soluble in water and in chloroform, soluble in alcohol (only with heating), insoluble in benzene and in hexane.

Methocarbamol tablets, USP are available as 500 mg and 750 mg tablets for oral administration.

Methocarbamol tablets, USP 500 mg are light orange colored, round shaped film coated tablets debossed with "Q" above the score line on one side and "500" on other side.

Methocarbamol tablets, USP 750 mg are light orange colored, caplet shaped film coated tablets debossed with "Q" on one side and "750" on other side.

Methocarbamol tablets, USP 500 mg and 750 mg contain the following inactive ingredients: colloidal silicon dioxide, maize starch, povidone, sodium lauryl sulfate, sodium starch glycolate, and stearic acid.

The tablets are coated with Aquapure Prime which contains FD&C yellow 6, hydroxypropylcellulose, hypromellose, polyorbate 80, propylene glycol, and titanium dioxide.

CLINICAL PHARMACOLOGY

The mechanism of action of methocarbamol in humans has not been established, but may be due to general central nervous system (CNS) depression. It has no direct action on the contractile mechanism of striated muscle, the motor end plate or the nerve fiber.

CORNING

Features and Benefits

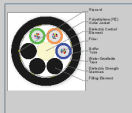

Loose tube design
Stable performance and compatibility with all accessories
New design
Self-supporting
Easy installation
Tensile strength
Suitable for installation in 10-20 kV electric field environ-
ment
Provides efficient and cost-effective cable preparation

Standards

Approval and Listing: RSC-17 (Fibers 100-100)
