SETUP AND INSTALLATION

To begin transferring data, the Bravura Easy Computer Sync software must be installed on both computers. The software can be installed via download from the Plugable website.

Software Installation

The Bravura Easy Computer Sync software is required for transfers. The product key is located on a small tag attached to the cable. You have unlimited use with this transfer cable and software.

- **Download:** Visit the official Plugable product page for the USB Transfer Cable to download the latest version of the software. The link can be found in the Quick Start Guide.

After downloading, run the installer on both computers. Follow the on-screen prompts, accepting the license agreement and entering your product key when prompted. A computer restart is recommended after installation to ensure all processes are finalized.

Connecting the Cable

Once the software is installed on both computers and they have been restarted, connect the USB Transfer Cable to an available USB port on each computer. The blue LED lights on the cable will illuminate, indicating a correct connection.

Video: This official Plugable Technologies video demonstrates how to use the USB Transfer Cable, including software installation and connection steps. Although the video title mentions USB 2.0, the instructions are applicable to the USB 3.0 version as well, with the primary difference being transfer speed.

OPERATING INSTRUCTIONS

The Plugable USB Transfer Cable facilitates the transfer of various file types between Windows PCs. This includes documents, photos, music, videos, and other data. Please note that installed programs and applications cannot be transferred; they must be reinstalled from their original source or downloads on the new computer.

Once the cable is connected and the software is running on both computers, you can select from several transfer modes:

- **Sync Files (Recommended):** Synchronizes folders between computers to make their contents identical.

MAINTENANCE

To ensure the longevity and optimal performance of your Plugable USB Transfer Cable, store it in a cool, dry place away from direct sunlight and extreme temperatures. Avoid bending or kinking the cable sharply, as this can damage internal wires. Keep connectors clean and free of dust or debris.

TROUBLESHOOTING

If you encounter issues with data transfer, ensure both computers are in a fully operational state. The transfer cable cannot perform transfers if a computer is in a non-operational state, such as Safe Mode, or any other state where normal access to the computer is not possible. If your computer is in such a state, it is highly recommended to seek

assistance from a local and trusted technician to diagnose and resolve the underlying problems before attempting data transfer.

Plugable TBT-TRAN Thunderbolt Transfer Cable FAQs

Thank you for your purchase of the Thunderbolt Transfer Cable! Your purchase includes a license to the Bravura Easy Computer Sync Software.

The 16 Character Product Key is located on a tag attached to the cable. It is good for unlimited uses by the owner of the cable.

All of the FAQs below, Easy Computer Sync software, and more are available on our website at theplugable.com/faq.

• What versions of Windows is this compatible with?

The TBT-TRAN is compatible with 64-bit versions of Windows 10 and 11

• My computers have USB-C ports, and/or USB-A Ports. Will this work for me?

No! The TBT-TRAN is compatible with Thunderbolt 4, Thunderbolt 3, and USB4 equipped computers **only**. If your computer is not equipped with these technologies, we would instead suggest to use our **USB3-TRAN** (USB 3.0) or our **USB-EASY-TRAN** (USB 2.0) Transfer Cables. Our **USBC-AF3** is available if you need to adapt the cable to USB-C.

• I've installed and started the software, but, I'm being asked for a Product Key, where do I find it?

The 16 Character Alphanumeric Product Key should be physically attached to the TBT-TRAN Transfer Cable. For further details about Product Keys, [click here](#).

• If the cable is 20Gbps, why am I not getting that speed when transferring?

That's a great question! The cable is a 20Gbps Thunderbolt cable, like for a dock or hub, for example. But, when in this linked mode (USB4 interdomain connections between two computers, 10Gbps is the maximum the cable can achieve at this time.

• I'm stuck at the "Waiting for Connection" screen and it isn't changing!

If you're getting a message about "Waiting for connection", first make sure that you've installed the latest version of Easy Computer Sync onto **both** computers. If you are still stuck at this screen, try the steps in [this guide](#).
