

Intermatic ET9250

Intermatic ET9250 ET90000 Series 4-Circuit Relay Module Instruction Manual

Model: ET9250

INTRODUCTION

The Intermatic ET9250 is a 4-circuit relay module designed for use with the Intermatic ET90000 series controllers. This module serves as a replacement part or an upgrade component, allowing for the expansion of the controller's circuit capacity. Each ET9250 module includes four SPDT (Single Pole Double Throw) 30 amp relays, facilitating robust control over various electrical loads.

IMPORTANT SAFETY INFORMATION

Please read and understand all instructions before installing or operating this device. Failure to follow these instructions could result in property damage, personal injury, or death.

- **Disconnect Power:** Always disconnect power at the circuit breaker or fuse box before installing or servicing this module.
- **Qualified Personnel:** Installation and servicing should only be performed by qualified electrical personnel.
- **Local Codes:** All wiring must comply with national and local electrical codes.
- **Proper Use:** Do not use this module for purposes other than those specified in this manual.
- **Environmental Conditions:** Ensure the module is installed in an environment free from excessive moisture, dust, and extreme temperatures.

PRODUCT OVERVIEW

The ET9250 module is a compact circuit board designed to integrate seamlessly with compatible Intermatic ET90000 series controllers. It provides additional switching capabilities for your system.

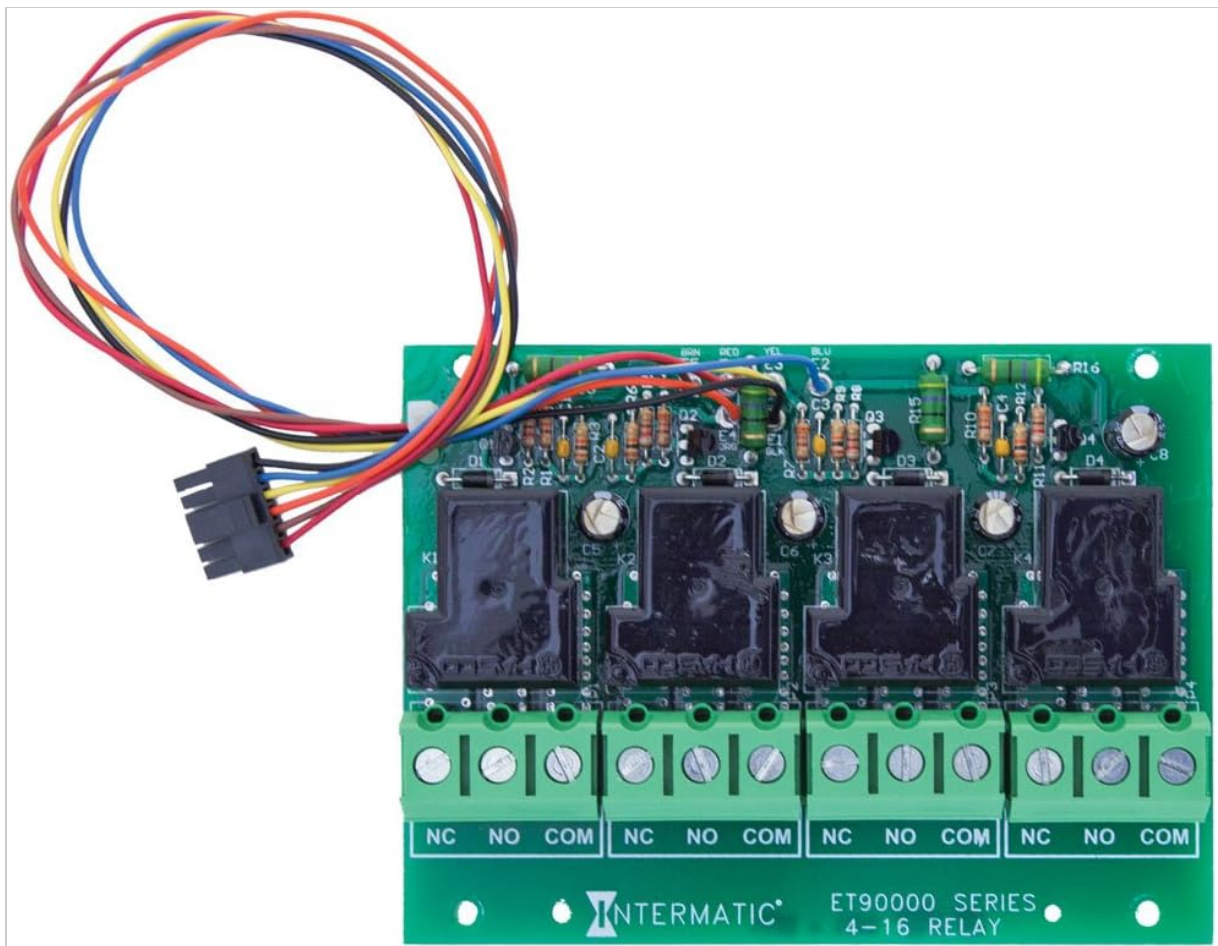

Figure 1: Intermatic ET9250 4-Circuit Relay Module. This image displays the Intermatic ET9250 4-Circuit Relay Module. The module features a green circuit board with four black SPDT 30 amp relays (labeled K1, K2, K3, K4). Below the relays are green terminal blocks labeled 'NC' (Normally Closed), 'NO' (Normally Open), and 'COM' (Common) for each of the four circuits. A multi-colored wire harness with a connector is attached to the top left of the board, indicating connection points for the main controller.

Key components include:

- **Four SPDT 30 Amp Relays:** These relays (K1-K4) are the primary switching components, capable of handling loads up to 30 amps.
- **Terminal Blocks:** Screw terminals for connecting external loads, clearly marked NC, NO, and COM for each circuit.
- **Wire Harness:** A multi-colored wire harness for connecting the module to the main ET90000 series controller.

INSTALLATION AND SETUP

The ET9250 relay module is designed for integration with specific Intermatic ET90000 series controllers, including models such as ET90415CR, ET98015CR, ET91215CR, and ET91615CR. It comes in 4-circuit packs, allowing for system expansion up to a maximum of 16 circuits.

Installation Steps:

1. **Power Disconnection:** Ensure all power to the ET90000 series controller is disconnected at the main circuit breaker before beginning installation.
2. **Access Controller:** Open the ET90000 series controller enclosure to access the internal components.
3. **Module Placement:** Carefully align the ET9250 module with the designated expansion slot or

mounting points within the controller.

4. **Connect Wire Harness:** Connect the multi-colored wire harness from the ET9250 module to the corresponding connector on the main controller board. Ensure a secure and correct connection.
5. **Secure Module:** Secure the module in place using any provided fasteners or clips.
6. **Wiring Loads:** Connect the electrical loads to the NC, NO, and COM terminals on the ET9250 module as required by your application. Refer to the specific wiring diagram for your ET90000 series controller for detailed instructions.
7. **Close Enclosure:** Once all connections are made and verified, close the controller enclosure.
8. **Restore Power:** Restore power to the controller at the main circuit breaker.
9. **System Configuration:** Follow the instructions in your ET90000 series controller manual to configure the newly added circuits.

OPERATION

The ET9250 relay module operates under the control of the main ET90000 series controller. Each of the four SPDT 30 amp relays can be programmed and controlled independently by the timer or automation functions of the primary unit. When the controller sends a signal, the corresponding relay will switch, opening or closing the circuit to which it is connected. This allows for automated control of various electrical devices or systems.

MAINTENANCE

The Intermatic ET9250 relay module is designed for reliable, long-term operation with minimal maintenance. However, periodic inspection can help ensure continued performance.

- **Visual Inspection:** Annually inspect the module and its connections for any signs of damage, corrosion, or loose wiring.
- **Cleanliness:** Keep the controller enclosure clean and free of dust and debris, which can impede proper operation and heat dissipation.
- **Environmental Protection:** Ensure the module remains protected from moisture and extreme temperatures as per its operating specifications.
- **Power Disconnection:** Always disconnect power before performing any inspection or cleaning.

TROUBLESHOOTING

If you experience issues with your ET9250 relay module, consider the following troubleshooting steps:

- **No Power to Load:** Verify that the main controller is receiving power and is programmed correctly. Check the wiring connections to the ET9250 module and the load for looseness or damage.
- **Incorrect Switching:** Ensure the programming in the main ET90000 series controller is correct for the desired switching action. Check for any error codes or indicators on the main controller.
- **Module Not Recognized:** If the main controller does not recognize the newly installed module, ensure the wire harness is securely connected and that the module is properly seated. Refer to the main controller's manual for module detection procedures.
- **Overload:** If a relay is not switching or appears damaged, check the connected load to ensure it does not exceed the 30 amp rating of the relay.
- **Professional Assistance:** For persistent issues or if you are unsure about any troubleshooting

steps, contact a qualified electrician or Intermatic customer support.

TECHNICAL SPECIFICATIONS

Specification	Detail
Model Number	ET9250
Brand	Intermatic
Contact Type	SPDT (Single Pole Double Throw)
Current Rating	30 Amps
Maximum Switching Current	30 Amps
Number of Circuits	4
Mounting Type	Surface Mount (within controller)
Operation Mode	Automatic (controlled by main unit)
Product Dimensions	5 x 3.75 x 1.25 inches
Item Weight	4.8 ounces
UPC	078275127746

WARRANTY INFORMATION

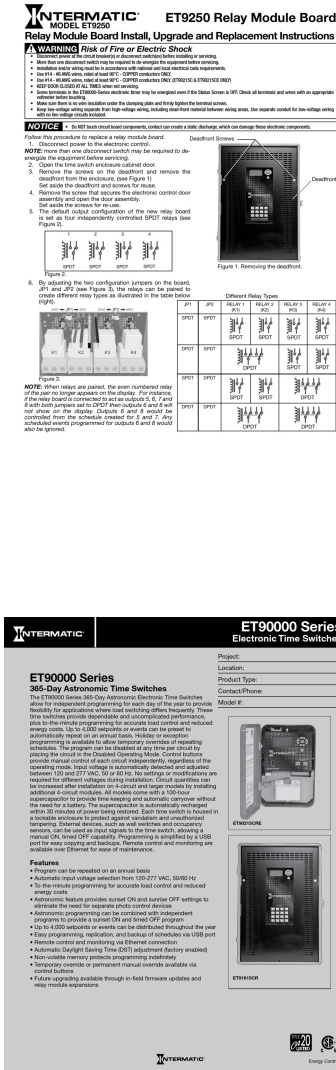

For detailed warranty information regarding the Intermatic ET9250 4-Circuit Relay Module, please refer to the manufacturer's official warranty description provided with your product or visit the Intermatic website. Warranty terms and conditions may vary.

CUSTOMER SUPPORT

If you require further assistance, have questions about installation, operation, or troubleshooting that are not covered in this manual, please contact Intermatic customer support. You can typically find contact information on the Intermatic website or within the documentation provided with your ET90000 series controller.

Electronic Controls

Intermatic offers a full line of 24-hour, 7-day, and dusk-to-dawn astronomic Electronic Time Controls to satisfy nearly any price point, schedule, or feature set that may be needed to fulfill a customer's needs.

The Basic Series handles simple schedules; the Basic Plus Series accommodates basic schedules that also require some breaks, such as holidays or special events; and the Advanced Series can automate even the most demanding and constantly changing schedules.

From straightforward 24-hour to 7-day with off-day and holiday exceptions, to complex 365-day advanced BEMS integration, we are working diligently to ensure that simple and affordable controls are available to meet all of your application needs.
