Circulator 10022a

Circulator Automatic 360 Rotating Pool Return Jet User Manual

Model: 10022a | Brand: Circulator

INTRODUCTION

The Circulator is an innovative, automatic 360-degree rotating return jet designed to enhance pool water circulation. It replaces your standard fixed return, significantly increasing water movement throughout your entire pool. This improved circulation helps distribute chemically treated water effectively, reaching all areas of the pool, from the surface to the floor. This manual provides essential information for the proper installation, operation, and maintenance of your Circulator to ensure optimal performance and longevity.

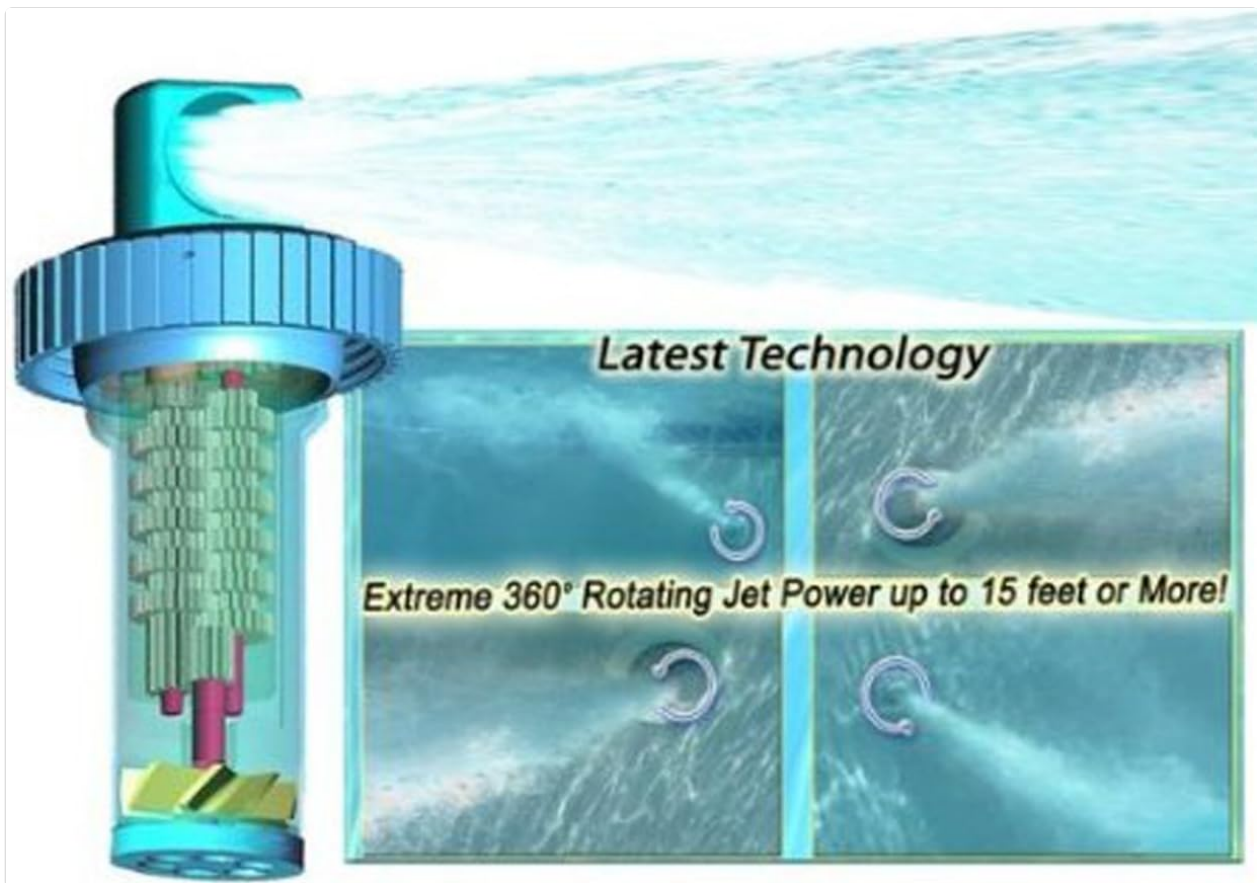

Figure 1: The Circulator in action, illustrating its powerful 360-degree rotating jet and enhanced water distribution.

SETUP AND INSTALLATION

Proper installation is crucial for the Circulator's effectiveness. Follow these steps carefully:

1. **Prepare the Return Jet:** Ensure your pool pump is turned off before beginning installation. The Circulator is designed to replace your existing fixed return jet.
2. **Install The Circulator:** Install The Circulator according to the manufacturer's instructions. This may require an adapter for unique wall returns.
3. **Secure Connection:** Ensure the product is properly connected to your pool's water system. Hand-tighten only to avoid damage.
4. **Activate Pump:** Turn on the pool pump to activate The Circulator.
5. **Adjust for Optimal Circulation:** Adjust the 360 rotating pool return jet as needed for optimal circulation in your pool. Observe the water flow to ensure it reaches all areas.

With hundreds of thousands sold worldwide, The Circulator will simply install into ALL pools.

PLEASE NOTE:
You may need a custom adapter for your unique type of pool which we will gladly create for you at a nominal charge.

*We have adapters for ALL pools worldwide. Some Samples Below

OPERATING INSTRUCTIONS

The Circulator operates automatically once installed and the pool pump is running. Its patented 360-degree rotating design ensures comprehensive water movement. The jet continuously rotates, pushing water up to 15 feet along the pool walls and down to the floor, effectively circulating the entire pool volume.

- **Automatic Rotation:** The internal mechanism uses the water pressure from your pump to create a continuous, sweeping motion.
- **Enhanced Distribution:** This action prevents stagnant areas, ensuring that heated water and chemicals are evenly distributed, which can lead to clearer water and reduced chemical usage.

With Old Standard Returns

Partial Top Layer Circulation

GREEN TO CLEAN**

With the New Advanced Circulator

Complete Circulation Throughout Pool

Figure 4: Visual comparison showing partial top-layer circulation with old standard returns versus complete circulation throughout the pool with The Circulator.

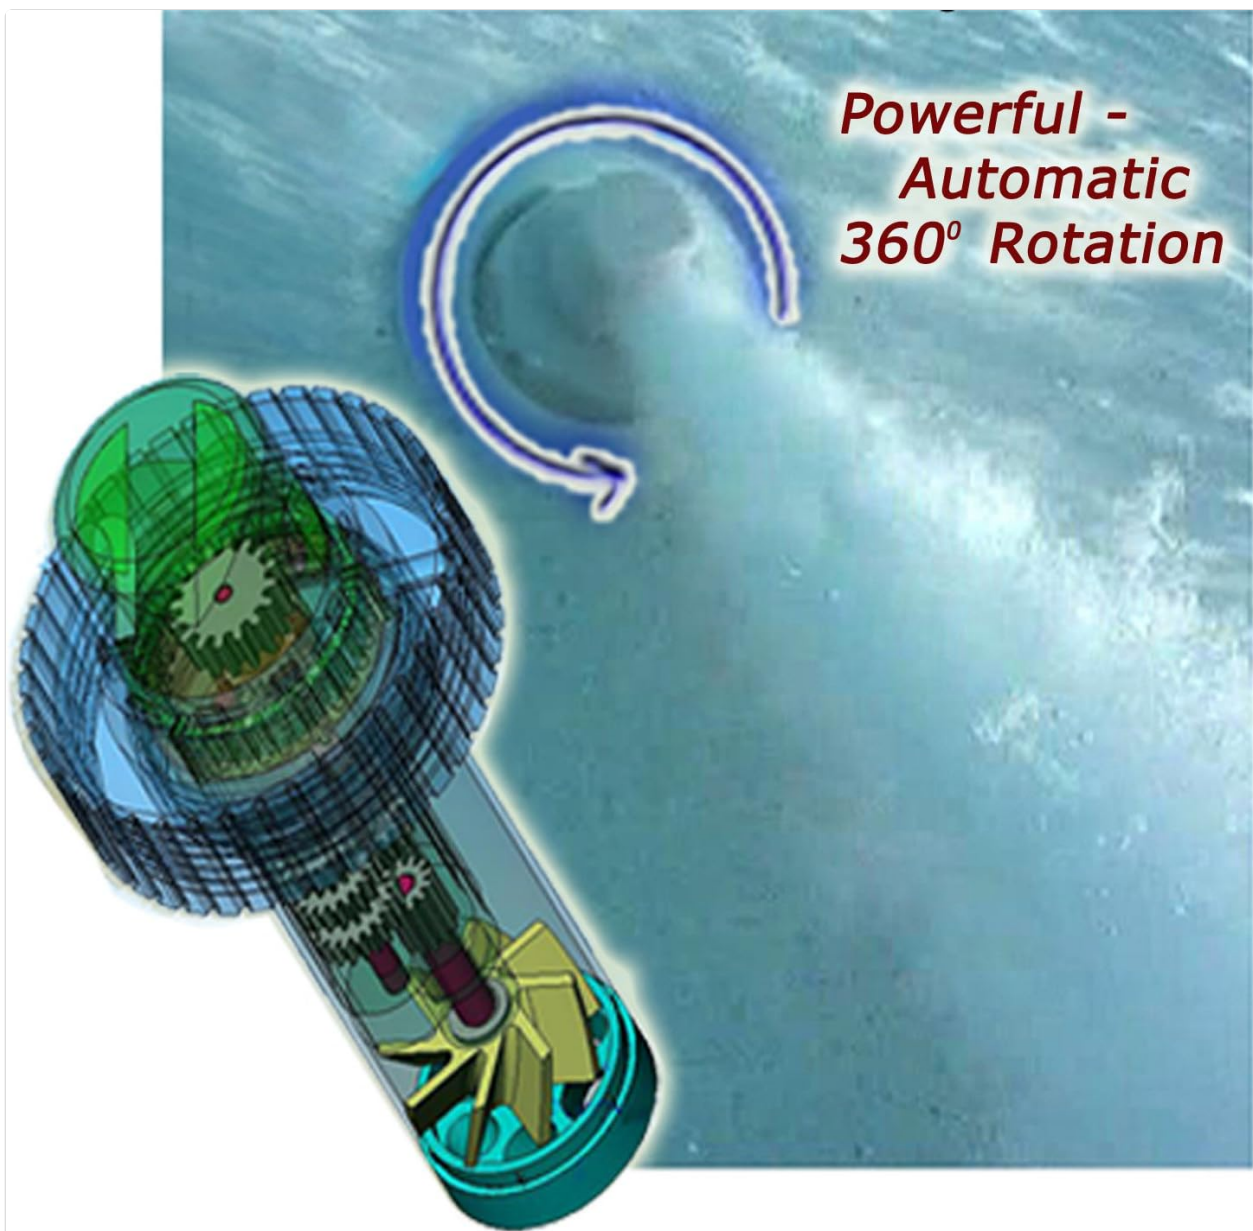

Figure 5: An illustration highlighting the powerful, automatic 360-degree rotation of The Circulator's jet, ensuring dynamic water movement.

MAINTENANCE

The Circulator is designed for durability and requires minimal maintenance. However, regular checks can prolong its lifespan and ensure continuous optimal performance:

- **Regular Inspection:** Periodically inspect the Circulator for any debris that might obstruct its rotation or water flow.
- **Cleaning:** If necessary, gently remove any accumulated debris. Avoid using harsh chemicals or abrasive tools that could damage the unit.
- **Monitor Pool Water:** Monitor the pool water for clarity and chemical balance, adjusting as necessary. The Circulator aids in chemical distribution, but proper chemical levels are still essential.

TROUBLESHOOTING

If you encounter issues with your Circulator, consider the following:

- **Reduced Rotation/Flow:** Check for blockages in the jet or the pool's plumbing system. Ensure your pool pump is operating at its recommended pressure.
- **No Rotation:** Verify that the Circulator is securely installed and that water is flowing through it. If the issue persists, remove the unit and check for internal obstructions.
- **Cloudy Water:** While The Circulator significantly improves circulation, cloudy water can indicate other issues such as improper chemical balance or a dirty filter. Address these factors in conjunction with using The Circulator.

SPECIFICATIONS

Feature	Detail
Product Dimensions	5.5 x 3 x 3 inches
Item Weight	4.2 ounces
Model Number	10022a
Manufacturer	ASSET - Circulator
