2. SAFETY INFORMATION

- Always disconnect the sewing machine from the power outlet before attempting to install or replace the light bulb.
- Allow the old bulb to cool completely before removal to prevent burns.
- Handle the new bulb by its base or with a clean cloth to avoid transferring oils from your skin, which can shorten bulb life.
- Ensure the replacement bulb matches the voltage and wattage specifications of your sewing machine to prevent damage. This bulb is 15 watts and 120 volts.
- Do not use this bulb in fixtures or appliances that exceed its specified wattage.

3. INSTALLATION

Follow these steps to safely install the Generic 7SCW Sewing Machine Light Bulb:

1. **Disconnect Power:** Unplug your sewing machine from the electrical outlet.
2. **Locate Bulb Compartment:** Refer to your sewing machine's original manual to locate the light bulb access panel or compartment. This is typically near the needle area.
3. **Remove Old Bulb:** Carefully unscrew the old bulb by turning it counter-clockwise. If the bulb is hot, wait for it to cool or use a cloth for protection.
4. **Insert New Bulb:** Gently screw the new Generic 7SCW bulb into the socket by turning it clockwise until it is snug. Do not overtighten.
5. **Secure Access Panel:** Replace any access panels or covers that were removed.
6. **Reconnect Power:** Plug your sewing machine back into the electrical outlet.

4. OPERATING INSTRUCTIONS

The Generic 7SCW Sewing Machine Light Bulb operates in conjunction with your sewing machine's power system. Once installed, the bulb will illuminate when the sewing machine's power switch is turned on, provided the machine is designed to activate the light with the main power.

- Turn on your sewing machine's power switch to activate the light.
- Turn off your sewing machine's power switch to deactivate the light.

5. MAINTENANCE

To ensure optimal performance and longevity of your light bulb:

- **Cleaning:** If the bulb becomes dusty, ensure the sewing machine is unplugged and the bulb is cool. Gently wipe the bulb with a soft, dry cloth. Do not use liquid cleaners.
- **Replacement:** Replace the bulb when it burns out or if its brightness significantly diminishes. Always follow the installation steps for replacement.

6. TROUBLESHOOTING

If the light bulb does not illuminate after installation:

- **Check Power:** Ensure the sewing machine is properly plugged into a working electrical outlet.
- **Check Installation:** Disconnect power and carefully re-screw the bulb to ensure it is seated correctly in the socket.
- **Verify Bulb Condition:** If possible, test the bulb in another compatible fixture or try a known working bulb in your sewing machine to determine if the issue is with the bulb or the machine's electrical system.
- **Machine Issue:** If other bulbs also fail to light, consult your sewing machine's manual or a qualified technician.
