Problem	Possible Cause	Solution
Tray does not rotate.	Tray not seated correctly on coupler/roller ring; debris under tray; motor malfunction.	Ensure tray is properly aligned with the coupler. Clean under the tray and roller ring. If problem persists, consult your microwave's service manual.
Tray wobbles or makes noise.	Tray not seated correctly; roller ring damaged or missing; uneven surface.	Re-seat the tray. Check the roller ring for damage or proper placement. Ensure the microwave is on a flat, stable surface.
Food not heating evenly.	Tray not rotating; food container too large; microwave power issues.	Verify tray rotation. Use smaller, microwave-safe containers. If the tray rotates correctly, the issue may be with the microwave unit itself.
