## Bosch H306

# BOSCH H306 12-inch Rear Wiper Blade Instruction Manual

Model: H306 | Brand: Bosch

## PRODUCT OVERVIEW

The Bosch H306 12-inch Rear Wiper Blade is engineered to provide clear visibility and reliable performance for your vehicle's rear windshield. Utilizing high-quality standards, this blade features wear-resistant natural rubber and a specially coated wiping edge for smooth, quiet operation and extended service life. It offers an Original Equipment (OE) fit, function, and appearance, ensuring compatibility with popular domestic, Asian, and European vehicles.

## INSTALLATION GUIDE

Follow these steps to replace your Bosch H306 Rear Wiper Blade. Ensure your vehicle is parked safely with the engine off before beginning installation.

### Step 1: Remove the Old Wiper Blade

1. Gently lift the wiper arm away from the rear windshield until it locks into an upright position.
2. Locate the release tab or button on the wiper blade connector. Press or lift this tab to disengage the old blade from the wiper arm.
3. Slide the old wiper blade off the wiper arm. Some blades may require a slight wiggle or rotation to release.

## Step 2: Install the New Wiper Blade

1. Align the new Bosch H306 wiper blade with the wiper arm. The blade features an integrated quick-clip connection.
2. Slide the new blade onto the wiper arm until it clicks securely into place. Ensure it is fully seated and locked.
3. Gently lower the wiper arm back onto the rear windshield.
4. Test the wiper blade operation to ensure proper function and a clear wipe.

## OPERATING INSTRUCTIONS

Once installed, the Bosch H306 Rear Wiper Blade operates automatically with your vehicle's rear wiper system.

Activate your rear wiper as needed for clear visibility during rain, snow, or when the rear window is dirty.

- Ensure the wiper arm is free of obstructions before activation.
- Use windshield washer fluid for optimal cleaning, especially when dealing with dirt or grime.
- The specialty coated natural rubber is designed for smooth, quiet operation, minimizing noise and streaking.

## MAINTENANCE

---

Regular maintenance of your wiper blade ensures optimal performance and longevity.

- **Clean Regularly:** Wipe the rubber blade edge with a damp cloth or a mild glass cleaner to remove dirt, oil, and road grime. This helps prevent streaking.
- **Inspect for Wear:** Periodically check the rubber blade for cracks, tears, or hardening. Replace the blade if you notice any signs of wear or if it starts to streak or chatter.
- **Avoid Ice Scrapers:** Do not use ice scrapers on the rubber blade, as this can damage the material.
- **Winter Care:** In freezing conditions, lift the wiper arm away from the windshield when parked to prevent the blade from freezing to the glass.

## TROUBLESHOOTING

---

If you experience issues with your Bosch H306 Rear Wiper Blade, consider the following common solutions:

- **Streaking:**
  - Clean the wiper blade and windshield thoroughly.
  - Check for debris lodged in the blade.
  - If cleaning doesn't help, the blade may be worn and require replacement.
- **Chattering/Squeaking:**
  - Ensure the wiper arm is not bent or damaged, causing uneven pressure.
  - Clean the blade and windshield.
  - Extreme temperatures can sometimes cause temporary chattering; it may resolve as temperatures normalize.
- **Incomplete Wipe:**
  - Verify the blade is correctly installed and fully seated on the wiper arm.
  - Check if the wiper arm spring tension is adequate. A weak spring may not apply enough pressure.
  - The blade may be worn and need replacement.
