### 2. Programming the Remote Control

Programming the GAPOSA QCT1 remote control is a simple process that typically involves interacting with your gate receiver unit. The exact steps may vary slightly depending on your specific gate system, but a common method is as follows:

1. **Access the Receiver:** Locate the control unit or receiver for your gate system. This is usually near the gate motor.
2. **Activate Learning Mode:** On the receiver, there is typically a "Learn" or "Program" button. Press and hold this button for a few seconds until an indicator light on the receiver illuminates or flashes, signifying it is in learning mode. Refer to your gate system's manual for precise instructions.
3. **Transmit Signal:** Within a few seconds of activating the learning mode on the receiver, press and hold the desired button on your new GAPOSA QCT1 remote control that you wish to program. Hold the button until the receiver's indicator light changes (e.g., stops flashing, turns solid, or turns off), indicating successful pairing.
4. **Test Functionality:** After programming, wait a few seconds, then test the remote control by pressing the programmed button. The gate should respond.

If you are replacing an existing remote, some systems allow cloning from an old remote. Consult your gate system's manual for alternative programming methods.
