## OPERATION

### Reading the Temperature:

The Fackelmann Tecno 16364 thermometer uses a traditional capillary column with petroleum fluid to indicate temperature. The red fluid level corresponds to the current temperature on the Celsius scale.

Read the temperature by observing the top of the red fluid column against the marked scale.

The temperature range displayed is from  $-30^{\circ}\text{C}$  to  $50^{\circ}\text{C}$ .

For optimal accuracy, allow the thermometer to acclimate to its environment for at least 30 minutes before taking a reading.

## MAINTENANCE

---

### Cleaning:

To clean the thermometer, simply wipe it with a soft, damp cloth. Do not use abrasive cleaners or immerse the thermometer in water.

### Storage:

Store the thermometer in a dry place when not in use for extended periods.

## TROUBLESHOOTING

---

### Inaccurate Readings:

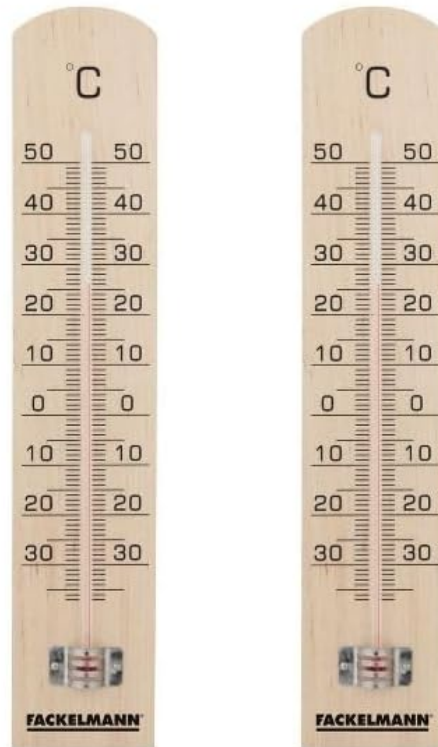

- If you suspect inaccurate readings, ensure the thermometer is placed in a location free from direct sunlight, drafts, or heat sources that could artificially influence the temperature.
- Verify that the fluid column is intact and not separated. Gently tap the thermometer to reunite any separated fluid.
- Compare the reading with another known accurate thermometer if available.
