4. SETUP

4.1 Installation

The Indesit FIMB 53 K.A IX is a built-in appliance. Installation should only be performed by a qualified electrician or authorized service technician in accordance with local safety regulations and the provided installation template. Ensure the appliance is properly secured and connected to the electrical supply.

4.2 First Use

1. Remove all packaging materials, protective films, and accessories from the oven cavity.
2. Clean the interior of the oven with a damp cloth and mild detergent, then dry thoroughly.
3. Before cooking food, heat the empty oven at its maximum temperature for approximately 60 minutes to burn off any manufacturing residues. Ensure the room is well-ventilated during this process. A slight odor may be present; this is normal.
4. Allow the oven to cool completely before its first use with food.

5. OPERATING INSTRUCTIONS

5.1 Setting the Clock

Upon initial power-up or after a power outage, the digital display will flash. Use the control buttons (refer to your specific model's button layout) to set the current time. Confirm the setting to stop the flashing.

5.2 Selecting a Cooking Function

1. Turn the Function Selector Knob to the desired cooking mode. For general baking and roasting, select the conventional cooking symbol (usually two horizontal lines).

2. The oven light will illuminate, and the heating elements will begin to operate.

5.3 Setting the Temperature

1. After selecting a function, turn the Temperature Selector Knob to the desired temperature in degrees Celsius.
2. The oven will begin to preheat. An indicator light (if present) will turn off once the set temperature is reached.

5.4 Using the Timer

Your oven's digital display allows you to set a cooking duration or a delayed start. Consult the specific button functions for your model to:

- **Set Cooking Duration:** Program the oven to switch off automatically after a set time.
- **Set End Time:** Program the oven to start and finish cooking at a specific time.
- **Minute Minder:** Use as a simple kitchen timer without affecting oven operation.

6. MAINTENANCE AND CLEANING

Regular cleaning and maintenance ensure the hygiene and efficiency of your oven.

6.1 General Cleaning

- **Exterior:** Clean the stainless steel exterior with a soft cloth and a non-abrasive cleaner specifically designed for stainless steel. Avoid harsh chemicals or abrasive pads.
- **Interior:** After each use, wipe the oven interior with a damp cloth once it has cooled. For stubborn stains, use a specialized oven cleaner, following the product instructions carefully. Ensure all cleaner residue is removed.
- **Oven Door:** Clean the glass door with a glass cleaner. Do not immerse the door in water.
- **Accessories:** Wash grids and trays in warm soapy water or in a dishwasher.

6.2 Replacing the Oven Light

Ensure the oven is disconnected from the power supply before attempting to replace the light bulb. Unscrew the protective glass cover, replace the old bulb with a new high-temperature resistant bulb (check specifications for wattage), and then reattach the cover.
