Vent-Axia Va100xht Axial Extract Fan User Manual

Model: 251510

INTRODUCTION

This manual provides comprehensive instructions for the installation, operation, and maintenance of your Vent-Axia Va100xht Axial Extract Fan with Humidity Sensor. Please read this manual thoroughly before installation and use to ensure safe and efficient operation.

SAFETY INFORMATION

WARNING: Electrical installation should only be carried out by a qualified electrician in accordance with national wiring regulations.

- Always disconnect the power supply before attempting any installation, maintenance, or repair.
- Ensure the fan is correctly earthed where applicable, and all wiring connections are secure.
- Do not operate the fan with damaged wiring or if the casing is compromised.
- This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.
- Children should be supervised to ensure that they do not play with the appliance.

PRODUCT OVERVIEW

The Vent-Axia Va100xht is an axial extract fan designed for bathrooms and other wet areas, featuring an integrated humidity sensor and an adjustable run-on timer. It is engineered to automatically manage ventilation based on ambient humidity levels and can also be linked to a room's lighting circuit.

Image: Front view of the Vent-Axia Va100xht Axial Extract Fan. The fan features a white square grille with horizontal slats and a circular spigot on the left side for duct connection. The "Vent-Axia" logo is visible in blue text on the bottom right of the fan's face.

SPECIFICATIONS

Feature	Detail
Model Number	251510
Power Supply	230/240V AC 50Hz
Extraction Rate	30 litres per second / 107 cubic metres per hour
Power Consumption	18 watts
Sound Output	36dB(A) @ 3m

Dimensions (H x W x D)	156mm x 156mm x 47mm (beyond installed surface)
Spigot Diameter	98mm (for 100mm / 4 Inch ducting)
Timer Adjustment	3 - 35 minutes
Insulation Class	Class II - double insulated
IP Rating	IPX4
Mounting Type	Wall or Ceiling Mounted
Special Features	Humidity Sensor, Automatic Back Draught Shutters

SETUP AND INSTALLATION

Proper installation is crucial for the fan's performance and safety. Refer to the detailed wiring diagram provided with the product packaging for specific connections.

Electrical Connection Requirements:

IMPORTANT: The fan requires a permanent live, a switched live, and a neutral connection (3 wires excluding earth) at the fan position for the timer functionality to operate correctly. Without a switched live, the fan will operate solely in humidity sensor mode.

The fan must be permanently connected to an unswitched supply in all installation scenarios.

Mounting:

The Va100xht fan can be installed on either a wall or a ceiling. Ensure the mounting surface is flat and secure. The fan is designed for use with 100mm (4-inch) diameter ducting.

Ducting:

Connect appropriate 100mm diameter ducting to the fan's spigot. Ensure ducting runs are as short and straight as possible to maximize airflow efficiency. Seal all ducting connections to prevent air leakage.

OPERATING INSTRUCTIONS

Humidity Sensor Operation:

The integrated humidity sensor continuously monitors the ambient humidity. When the humidity level in the room exceeds a pre-set threshold, the fan will automatically activate. It will continue to run until the humidity drops below the threshold, after which it will operate for the duration of the pre-set run-on timer.

Light Switch Operation:

If wired with a switched live connection, the fan can also be activated in conjunction with the room's light switch. When the light is switched on, the fan will start. When the light is switched off, the fan will continue to run for the duration of the pre-set run-on timer.

Timer Adjustment:

The run-on timer is adjustable from 3 to 35 minutes. To adjust the timer, carefully remove the front grille (refer to installation instructions for access) and locate the timer adjustment screw. Use a small screwdriver to turn the screw to increase or decrease the run-on time. Test the setting before re-securing the grille.

MAINTENANCE

Regular cleaning will ensure optimal performance and longevity of your Vent-Axia fan.

1. **Disconnect Power:** Always switch off and isolate the electrical supply to the fan before any cleaning or maintenance.
2. **Clean Exterior:** Wipe the exterior casing and grille with a soft, damp cloth. Do not use abrasive cleaners, solvents, or harsh chemicals.
3. **Clean Impeller:** Carefully remove the front grille (as per installation instructions). Gently clean any dust or debris from the fan impeller blades using a soft brush or vacuum cleaner. Ensure no moisture enters the electrical components.
4. **Reassemble:** Once clean and dry, reattach the front grille securely.
5. **Frequency:** Clean the fan at least once every three months, or more frequently in dusty or high-humidity environments.

TROUBLESHOOTING

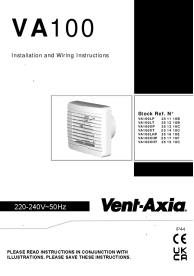

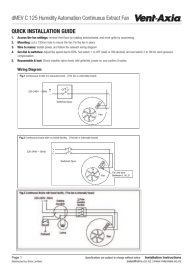

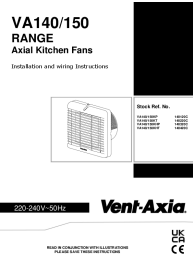

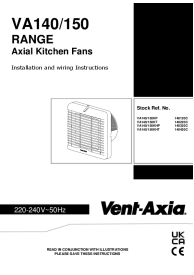

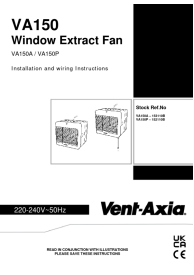

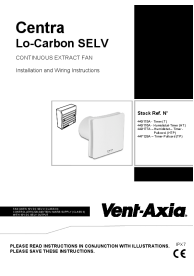

Problem	Possible Cause	Solution
Fan does not operate.	No power supply. Incorrect wiring. Humidity level not met (if in humidity mode only).	Check circuit breaker/fuse. Verify wiring connections (consult electrician). Increase humidity or test with light switch (if wired).
Fan runs continuously.	Humidity sensor set too low or faulty. Timer set too long or faulty. Switched live permanently on.	Adjust humidity sensor setting. Adjust timer setting. Check light switch wiring (consult electrician).
Reduced airflow/noisy operation.	Blocked grille or impeller. Ducting obstruction. Loose mounting.	Clean grille and impeller. Check ducting for blockages. Secure mounting screws.
Humidity sensor not responding.	Sensor faulty. Incorrect wiring (no permanent live).	Contact Vent-Axia support. Verify wiring (consult electrician).

If the problem persists after attempting these solutions, please contact a qualified electrician or Vent-Axia customer support.

WARRANTY AND SUPPORT

For warranty information, please refer to the documentation supplied with your product or visit the official Vent-Axia website. Keep your proof of purchase for warranty claims.

For technical support or spare parts, please contact Vent-Axia customer service through their official channels. When contacting support, please have your model number (251510) and purchase date available.

- Available with electric shutter
- Sensors and auto mode controllers save energy by switching the ventilation units on only when needed and when the room is occupied
- Adjustable timeout timer option available (5-30 minutes)
- Meets current Building Regulations Approved Document F
- IP94 rated - IPX7 (SEI)
- *SEI Soundmark to BS 6841: 2003 70dB*

Bathroom & Toilet Ventilation

Bathroom & Toilet Ventilation

Designed in a clean white finish and suitable for ambient temperatures up to +40°C the unit is fitted with Standard Thermal Overload Protection (STOP).

Safety Extra Low Voltage (SELV)

Designed for areas where a fan has to be fitted over or within Zone 1 in a room containing a hot bath or shower according to IEE wiring regulations (BS 7671). SEN models can be safely installed under the spray area. SEN models are rated IP67. Control is by means safety isolating transformer unit with SEN2 output, which is wired away from any source of spray and out of reach of anyone using a hot bath or shower.

VA100/SEIV

- Inductive lift
- Power safety switch or self monitoring
- Available with electric drive
- Sensors and steel mode switches save energy by switching the worktable on only when needed and after the zone is occupied
- Available sensors detect objects smaller than 20 cm diameter
- Inherently safe Rolling Impedance Approved® design
- CE mark and CE mark ENEC
- ISO 9001 and ISO 14001
- ISO 14001 and ISO 9001

Inductive and Steel Identification

The VA100 series is designed to be integrated in stainless-steel, aluminium and plastic worktables. It is suitable for power monitoring and self detection of objects that are heavily conducting electricity.

Designed to be used where steel and/or plastic in combination requires a very high degree of safety with Standard Power Control Protection (S1, C1, F1).

Safety Extra Low Voltage from SEIV®

Available in two versions for use in the worktable zone. The Zone is a non-conducting material that is made of plastic or EPO resin impregnated with 250V, 500V or 1000V cables. The cables are made of plastic, and the zone can be used with PVC cables to ensure safety switching technology and ISO 9001 compliance. It is used for zones with any type of zone and is suitable for systems with any type of drive.

VATO3/SEV

- Industrial light
- Heat sink surface with air-cooling
- Available with various colors
- Lens and side-to-side ventilation ensuring the ventilation with air flow even under the most adverse conditions
- Adjustable mounting (90° and 180° rotation)
- Available in 1000 and 1500 mm long versions
- 1000 mm version has a built-in 1000 mm fluorescent luminaire
- P/N: order - P/N2 and P/N3
- P/N3 and P/N4 versions - P/N3 and P/N4

Radiation and Solar Ventilation

The VATO series is designed to provide the best thermal balance for the luminaire, both in terms of heat dissipation and solar radiation. Available in various sizes, it is easy to mount and has various options for mounting and mounting accessories.

Designed as a clean white light and suitable for industrial temperatures, the VATO series is available in 1000 and 1500 mm versions.

Safety Extra Low Voltage Form (SELV)

Designed as a clean white light and suitable for industrial temperatures, the VATO series is available in 1000 and 1500 mm versions. It is a non-hazardous light fixture that does not emit any strong magnetic field and is safe to use in hazardous areas. It is designed to be used in hazardous areas (ATEX) and is suitable for use in hazardous areas (ATEX) and is suitable for use in hazardous areas (ATEX).
