## ASSEMBLY INSTRUCTIONS

---

Assembly of the TecTake Workbench requires patience and attention to detail. It is recommended to have a second person assist with assembly for easier handling of components. Tools required for assembly typically include a screwdriver and a wrench (not included).

### Step 1: Unpack and Organize Components

Carefully unpack all components and lay them out on a clean, flat surface. Identify each part by comparing it with the parts list in the assembly instructions. Separate all fasteners into groups to simplify the process.

## **Step 2: Assemble the Main Frame**

Begin by assembling the main steel frame. Connect the vertical legs to the horizontal support beams using the provided bolts and nuts. Do not fully tighten all bolts until the entire frame is assembled to allow for minor adjustments.

## **Step 3: Install the Work Surface and Lower Shelf**

Place the main work surface onto the designated frame supports. Secure it using the appropriate screws. Similarly, install the lower storage shelf into its position, ensuring it is level and securely fastened.

## **Step 4: Attach the Pegboard and Upper Shelf**

Mount the pegboard to the rear uprights of the frame. Ensure it is oriented correctly. Then, attach the upper storage shelf above the pegboard, securing it firmly.

## **Step 5: Assemble and Install the Drawer**

Assemble the drawer components according to the separate drawer assembly instructions. Once assembled, slide the drawer into its designated runners beneath the main work surface. Ensure it operates smoothly.

## **Step 6: Final Tightening and Inspection**

Once all components are in place, go back and fully tighten all bolts and screws. Ensure the workbench is stable and does not wobble. Attach the rubber feet to the bottom of the legs. Place the 12 hooks into the pegboard as desired.

## OPERATING INSTRUCTIONS

---

The TecTake Workbench is designed for versatile use. Follow these guidelines for optimal operation.

### Using the Work Surface

The main work surface provides a spacious area for various tasks. Ensure that heavy items are placed centrally and that the total weight does not exceed the workbench's capacity. Avoid using the surface for cutting directly without a protective mat to prevent damage.

### Utilizing the Pegboard

The integrated pegboard allows for convenient storage of frequently used tools. Use the provided hooks, or compatible pegboard accessories, to hang tools such as hammers, pliers, and screwdrivers. This keeps your workspace clear and tools easily accessible.

## Drawer Functionality

The large drawer is ideal for storing smaller tools, fasteners, or sensitive equipment. Pull the handle to open and push to close. Avoid overloading the drawer to ensure smooth operation and prevent damage to the runners.

## Lower Storage Shelf

The lower shelf provides additional storage for larger tools, power equipment, or materials. Ensure items are placed securely and do not obstruct movement around the workbench.

## MAINTENANCE

---

Regular maintenance will ensure the longevity and safe operation of your TecTake Workbench.

- **Cleaning:** Wipe down the work surface and frame regularly with a damp cloth to remove dust, dirt, and debris. Avoid harsh chemicals that may damage the finish.
- **Fastener Check:** Periodically check all bolts, screws, and connections to ensure they remain tight. Re-tighten any loose fasteners to maintain stability.
- **Surface Protection:** Consider using a protective mat on the work surface for tasks that involve cutting, drilling, or heavy impact to prevent damage to the wood fibreboard.
- **Drawer Maintenance:** Keep the drawer runners clean and free of obstructions. If the drawer becomes stiff, a small amount of silicone lubricant can be applied to the runners.
- **Weight Distribution:** Always distribute weight evenly across the work surface and shelves to prevent stress on the frame.

## TROUBLESHOOTING

---

If you encounter issues with your workbench, refer to the following common problems and solutions.

### Workbench is Unstable or Wobbles

- **Check Fasteners:** Ensure all bolts and screws are fully tightened. Loose connections are a common cause of instability.
- **Level Surface:** Verify that the workbench is placed on a completely flat and level surface. Adjust the rubber feet if necessary to compensate for uneven floors.
- **Even Weight Distribution:** Ensure that weight on the work surface and shelves is evenly distributed.

### Drawer Does Not Slide Smoothly

- **Check Alignment:** Ensure the drawer runners are correctly aligned and not bent.
- **Clear Obstructions:** Remove any debris or objects that might be blocking the drawer runners.
- **Lubrication:** Apply a small amount of silicone lubricant to the drawer runners if they are stiff.
- **Overloading:** Reduce the weight in the drawer if it is overloaded.

### Missing or Damaged Parts

- If you discover missing or damaged parts upon unpacking, do not proceed with assembly. Contact TecTake customer support immediately for assistance and replacement parts.
