

Homedics UHE-HDC4

HoMedics Demineralization Cartridge UHE-HDC4 User Manual

For Ultrasonic Humidifiers

1. INTRODUCTION

Thank you for choosing HoMedics Demineralization Cartridges. These cartridges are designed to enhance the performance of your HoMedics ultrasonic humidifier by reducing mineral buildup and white dust caused by hard water. Please read this manual carefully to ensure proper use and maintenance of your cartridges.

2. PRODUCT OVERVIEW

The HoMedics Demineralization Cartridge (Model UHE-HDC4) is a replacement filter specifically engineered to filter mineral deposits such as calcium, lime, and magnesium from your humidifier's water. This process helps prevent the release of 'white dust' into the air, which can settle on furniture and surfaces.

Each package contains four cartridges, providing an extended period of use before replacement is needed. Each cartridge is designed to last for approximately 30-40 full tank uses, though this can vary based on the hardness of your water.

3. COMPATIBILITY

These demineralization cartridges are compatible with any HoMedics ultrasonic humidifier that has a water tank capacity of 0.5 gallons (approximately 1.9 liters) or larger. Ensure your humidifier model meets this requirement for optimal performance.

4. SETUP AND INSTALLATION

Installing the HoMedics Demineralization Cartridge is a simple process:

1. Ensure your humidifier is turned off and unplugged from the power outlet.
2. Remove the water tank from the humidifier base.
3. Fill the water tank with clean, cool tap water.
4. Carefully drop one demineralization cartridge directly into the filled water tank. There is no specific orientation required.
5. Securely replace the water tank onto the humidifier base.
6. Plug in your humidifier and turn it on. The cartridge will begin working immediately.

5. OPERATING AND USAGE

Once installed, the demineralization cartridge works continuously to filter minerals from the water as your humidifier operates. For optimal performance, it is recommended to replace the cartridge after 30-40 full tank uses. This duration may be shorter if you have extremely hard water.

Using these cartridges helps maintain the efficiency of your humidifier and reduces the need for frequent cleaning due to mineral buildup.

6. MAINTENANCE

Regular replacement of the demineralization cartridge is crucial for effective mineral reduction and to prolong the life of your humidifier. When you notice an increase in white dust around your humidifier, it is an indicator that the cartridge needs to be replaced.

- **Replacement Frequency:** Replace the cartridge every 30-40 tank fillings, or approximately once a month with regular use, depending on water hardness.
- **Disposal:** Dispose of used cartridges with regular household waste.

**eliminate
buildup**

7. TROUBLESHOOTING

If you experience any of the following issues, consider the suggested solutions:

- **Increased White Dust:** If you notice an increase in white dust despite using a demineralization cartridge, it is likely time to replace the cartridge. The effectiveness of the cartridge diminishes over time and with water hardness.
- **Humidifier Not Producing Mist:** Ensure the humidifier is properly assembled, filled with water, and the power is connected. This issue is typically not related to the demineralization cartridge itself.
- **Unusual Odor:** If an odor develops, clean your humidifier thoroughly according to its specific instruction manual. Replace the water and consider using a new demineralization cartridge.

8. SPECIFICATIONS

Feature	Detail
---------	--------

Brand	HoMedics
Model Name	UHE-HDC4
Product Dimensions (each)	0.87"D x 1.75"W x 0.87"H (approx. 2.2 cm D x 4.4 cm W x 2.2 cm H)
Item Weight (each)	7.26 g (0.256 ounces)
Included Components	Package of 4 HoMedics Ultrasonic Humidifier Demineralization Cartridges
Number of Pieces	4
UPC	031262059413
