3. SETUP

3.1 Battery Installation

The Chamberlain 128REV typically comes with a Lithium Ion battery pre-installed. If not, or if replacement is needed, carefully open the battery compartment (usually on the back or side) and insert the 3V Lithium Ion battery, ensuring correct polarity.

3.2 Mounting the Wall Button

Choose a convenient indoor location within range of your garage door or gate opener. Use the provided fastening screws to securely mount the wall button to a flat surface. Since it is wireless, no electrical wiring is required.

3.3 Programming the Wall Button

To program the wall button to your opener, follow the specific programming instructions for your Chamberlain garage door or gate opener model. Generally, this involves:

1. Locating the 'Learn' button on your opener's motor unit.
2. Pressing and releasing the 'Learn' button. The LED indicator on the opener will illuminate.
3. Within 30 seconds, press and hold the desired button on your 128REV wall button until the opener's light flashes or you hear a click, indicating successful programming.
4. Repeat the process for the second channel if you wish to control another opener.

Refer to your opener's manual for detailed programming steps, as procedures may vary slightly between models.

4. OPERATING INSTRUCTIONS

Once programmed, operating the Chamberlain 128REV Wireless Wall Button is straightforward:

- To open or close the first programmed garage door/gate, press the upper button.
- To open or close the second programmed garage door/gate, press the lower button.

The button sends a signal to your opener, initiating the open or close cycle. Ensure the path of the door/gate is clear before activation.

5. MAINTENANCE

The Chamberlain 128REV Wireless Wall Button requires minimal maintenance.

- Battery Replacement:** When the button's range decreases or it becomes unresponsive, it may be time to replace the 3V Lithium Ion battery. Refer to section 3.1 for battery installation.
- Cleaning:** Wipe the surface of the button with a soft, dry cloth. Avoid using abrasive cleaners or solvents, as these can damage the finish.

6. TROUBLESHOOTING

If you encounter issues with your Chamberlain 128REV Wireless Wall Button, consider the following:

Problem	Possible Cause	Solution
Button does not activate opener.	Low or dead battery. Button not programmed correctly. Out of range.	Replace battery. Reprogram the button (see Section 3.3). Move closer to the opener's motor unit.
Reduced operating range.	Low battery. Interference from other devices.	Replace battery. Identify and remove sources of interference (e.g., other wireless devices).
Button activates wrong opener.	Incorrect programming.	Clear all codes from the opener and reprogram the button (see Section 3.3).
