Kohler 7395-SN

KOHLER MasterShower Showerarm and Flange K-7395-SN User Manual

Model: K-7395-SN | Brand: Kohler

INTRODUCTION

This manual provides essential information for the installation, operation, and maintenance of your KOHLER MasterShower Showerarm and Flange, model K-7395-SN. This shower arm is designed to provide a secure mount for various showerheads and includes a decorative round flange. Its all-metal construction ensures durability and long-lasting performance.

SETUP AND INSTALLATION

Proper installation is crucial for the optimal performance and longevity of your shower arm. Please follow these general guidelines. For detailed plumbing instructions, consult a qualified professional.

- **Required Connection:** The shower arm features a 1/2 inch NPT (National Pipe Taper) connection, which is a standard plumbing size. Ensure your existing plumbing is compatible.
- **Mounting:** The shower arm is designed for wall-mounted installation. Ensure the wall structure can adequately support the fixture and any attached showerhead.
- **Thread Sealing:** Apply plumber's tape or thread sealant to the threaded ends of the shower arm before installation to prevent leaks.
- **Flange Placement:** Position the round flange against the finished wall surface to cover the opening around the shower arm.
- **Tightening:** Hand-tighten connections first, then use a wrench to tighten securely, being careful not to overtighten, which can damage threads or finishes.

This diagram illustrates the dimensions and connection type for the K-7395 shower arm. It shows a length of 5-3/8 inches (137 mm) and a 1/2 inch NPT (National Pipe Taper) connection, typical for shower installations. All product dimensions are nominal.

OPERATING

Once installed, the KOHLER MasterShower Showerarm and Flange functions as a conduit for water from your plumbing system to your showerhead. Ensure your showerhead is securely attached to the threaded end of the shower arm. Water

flow is controlled by your shower valve (not included).

MAINTENANCE

To maintain the appearance and performance of your KOHLER MasterShower Showerarm and Flange, follow these simple cleaning instructions:

- **Regular Cleaning:** Clean the surface regularly with a soft, damp cloth.
- **Mild Cleaners:** Use only mild soap and water. Avoid abrasive cleaners, harsh chemicals, or scouring pads, as these can damage the finish.
- **Drying:** After cleaning, wipe the surface dry with a soft cloth to prevent water spots.
- **Finish Durability:** KOHLER finishes are designed to resist corrosion and tarnishing, exceeding industry durability standards. Proper care will help maintain this quality.

TROUBLESHOOTING

If you encounter issues with your shower arm, consider the following common troubleshooting steps:

- **Leaks at Connection Points:**
 - Ensure all threaded connections are properly tightened.
 - Verify that plumber's tape or thread sealant was applied correctly and is intact.
 - If leaks persist, disassemble, reapply sealant, and reassemble carefully.
- **Loose Shower Arm:**
 - Check the connection point within the wall. If accessible, ensure the internal plumbing is secure.
 - Ensure the flange is tightly against the wall and not allowing movement.

For issues beyond these basic steps, it is recommended to contact a qualified plumber or KOHLER customer service.

SPECIFICATIONS
