

## Thomas Earnshaw ES-8003-01

# Thomas Earnshaw ES-8003-01 Regency Automatic Watch User Manual

Model: ES-8003-01

## INTRODUCTION

This manual provides detailed instructions for the proper use and care of your Thomas Earnshaw ES-8003-01 Regency Automatic Self-Wind Watch. Please read this manual thoroughly to ensure optimal performance and longevity of your timepiece.

The ES-8003-01 is an automatic self-winding watch featuring an analog display, a black dial with grey index, and a sapphire-coated hardened mineral lens. It is designed for daily wear and is water-resistant up to 50 meters (165 feet).

## WATCH COMPONENTS

**Image 1:** Front view of the Thomas Earnshaw ES-8003-01 Regency Automatic Watch. This image displays the black dial with Roman numerals, the exposed balance wheel (open heart design), and the crown on the right side of the case.

- **Crown:** Used for winding the watch and setting the time.
- **Dial:** Features a black background with grey index markers and Roman numerals.
- **Hands:** Hour, minute, and second hands for time display.
- **Movement:** Automatic self-winding mechanical movement.
- **Case:** Stainless steel case.
- **Strap:** Croco pattern genuine leather strap.
- **Crystal:** Sapphire-coated hardened mineral lens.

## SETUP

### Initial Winding

As an automatic watch, the ES-8003-01 is powered by the motion of your wrist. However, for initial setup or if the watch has stopped due to lack of wear, manual winding is recommended.

1. Ensure the crown is in its normal, pushed-in position.
2. Turn the crown clockwise approximately 20-30 times. This will provide sufficient power reserve to start the watch.
3. The second hand should begin to move.

### Setting the Time

1. Pull the crown out to its outermost position.
2. Turn the crown clockwise or counter-clockwise to set the hour and minute hands to the correct time.
3. Once the time is set, push the crown back into its normal position.

## OPERATING THE WATCH

### Automatic Movement

The ES-8003-01 features an automatic self-winding movement. This means the watch is powered by the natural motion of your arm while wearing it. When worn daily for approximately 8-10 hours, the watch will maintain its power reserve.

If the watch is not worn for an extended period (typically 36-40 hours, depending on the specific movement's power reserve), it will stop. Simply manually wind it as described in the "Initial Winding" section, or wear it for a few hours to restart the movement.

**Image 2:** The Thomas Earnshaw ES-8003-01 Regency Automatic Watch displayed on a wrist, illustrating its size and fit during wear, which contributes to its self-winding mechanism.

## Water Resistance (5 ATM / 50 Meters)

This watch is water-resistant to 5 ATM (50 meters / 165 feet). This rating means it is suitable for short periods of recreational swimming and showering. It is not suitable for diving, snorkeling, or prolonged water activities.

- Do not operate the crown while the watch is wet or submerged in water.
- Ensure the crown is fully pushed in before any contact with water.
- Avoid exposing the watch to hot water or steam, as this can compromise the water seals.

## MAINTENANCE AND CARE

---

- **Cleaning:** Wipe the watch case and crystal with a soft, dry cloth regularly to remove dust and smudges. For the leather strap, avoid excessive moisture and clean with a specialized leather cleaner if necessary.
- **Avoid Extreme Temperatures:** Do not expose your watch to extreme temperatures (above 60°C / 140°F or below 0°C / 32°F) or sudden temperature changes.
- **Magnetic Fields:** Keep the watch away from strong magnetic fields (e.g., speakers, refrigerators, mobile phones, airport security scanners), as these can affect the accuracy of the mechanical movement.
- **Shocks:** While durable, avoid dropping the watch or subjecting it to severe impacts.
- **Service:** Mechanical watches benefit from periodic servicing (typically every 3-5 years) by a qualified watchmaker to ensure optimal performance and seal integrity.

**Image 3:** The Thomas Earnshaw ES-8003-01 Regency Automatic Watch presented within its black branded gift box, indicating proper storage when not in use.

## TROUBLESHOOTING

- **Watch has stopped:**
  - Ensure the watch is fully wound. Manually wind the crown 20-30 times.
  - Wear the watch for several hours to allow the automatic movement to build power reserve.
- **Watch is running inaccurately:**
  - Check if the watch has been exposed to strong magnetic fields. If so, a professional

demagnetization may be required.

- Ensure the watch is fully wound and worn consistently.
- If inaccuracy persists, professional servicing may be needed.

• **Condensation under the crystal:**

- This indicates a breach in the water resistance. Avoid further water exposure.
- Seek immediate professional service to prevent damage to the movement.

**SPECIFICATIONS**

Model Number	ES-8003-01
Movement	Automatic Self-Wind
Display Type	Analog
Case Material	Stainless Steel
Dial Color	Black with Grey Index
Crystal Material	Sapphire Coated Hardened Mineral Lens
Strap Material	Croco Pattern Genuine Leather
Water Resistance	5 ATM (50 Meters / 165 Feet)
Product Dimensions	5.91 x 5.91 x 5.91 inches; 2.4 ounces

**Image 4:** A visual guide illustrating various watch case sizes in millimeters (14-16mm to 50-54mm) and a side profile indicating thickness in inches (1 inch to 2 inches). This helps in understanding the general scale of watch dimensions.

**WARRANTY AND SUPPORT**

Thomas Earnshaw watches are manufactured to high standards and undergo rigorous quality control. For specific warranty terms and conditions, please refer to the warranty card included with your purchase or visit the official Thomas Earnshaw website.

For technical support, service inquiries, or replacement parts, please contact Thomas Earnshaw customer service through their official channels. Keep your proof of purchase for warranty claims.
