1. **Ensure Compatibility:** Verify that your vacuum cleaner model is listed in the "Product Overview" section to ensure proper fit.
2. **Power Off:** Always unplug your vacuum cleaner from the power outlet before attaching or detaching any accessories.
3. **Identify Connection Points:** Locate the connection port on your vacuum cleaner's hose or main unit where the tube is to be inserted. Identify the corresponding end of the aluminum tube.
4. **Insert Tube:** Gently insert the narrower end of the aluminum tube into the vacuum cleaner's hose or main unit connection port.
5. **Secure Connection:** Push firmly until the tube is securely seated. Some models may have a click mechanism or a locking button; ensure it engages if present.
6. **Attach Accessories:** Once the tube is securely attached, you can connect your desired vacuum cleaner accessories (e.g., floor nozzle, crevice tool) to the wider end of the aluminum tube.
7. **Test Connection:** Before operating, gently tug on the tube to ensure it is firmly attached and will not detach during use.

OPERATING INSTRUCTIONS

The aluminum tube functions as an extension for your vacuum cleaner, allowing you to reach various surfaces and areas. Its operation is directly tied to the vacuum cleaner it is attached to.

- **Extension:** Use the tube to extend the reach of your vacuum cleaner, making it easier to clean floors, ceilings, and other hard-to-reach areas without bending or stretching excessively.
- **Accessory Attachment:** The tube provides a stable connection point for various vacuum cleaner accessories, such as floor nozzles, brushes, and crevice tools. Ensure accessories are firmly attached to the end of the tube before use.
- **Airflow:** The tube is designed to maintain optimal airflow from the vacuum cleaner to the cleaning attachment, ensuring efficient suction.

Always operate your vacuum cleaner according to its specific instruction manual. The aluminum tube is a passive component that facilitates the vacuum cleaner's function.

MAINTENANCE AND CARE

Proper maintenance of your aluminum tube will ensure its longevity and continued performance.

- **Regular Cleaning:** Periodically wipe the exterior of the tube with a soft, damp cloth to remove dust and dirt. Avoid abrasive cleaners or solvents that could damage the aluminum finish.
- **Check for Obstructions:** If you notice a decrease in suction, detach the tube and visually inspect its interior for any blockages (e.g., large debris, tangled hair). Clear any obstructions carefully.
- **Inspect Connections:** Regularly check the ends of the tube for any signs of wear, cracks, or damage that could affect the seal with the vacuum cleaner or accessories.
- **Storage:** Store the tube in a dry place, away from extreme temperatures and direct sunlight, to prevent material degradation.
