## INSTALLATION INSTRUCTIONS

Proper installation is crucial for the correct function of the Geberit Spindle. Follow these steps carefully:

1. **Preparation:** Ensure the water supply to the relevant fixture is turned off before beginning installation.
2. **Removal of Old Component:** Carefully remove the existing spindle or component from the fixture. Note its orientation and any associated seals.
3. **Inspection:** Inspect the housing for any debris or damage. Clean if necessary.
4. **Installation of New Spindle:** Insert the Geberit Spindle (240.925.00.1) into its designated position. Ensure it seats correctly.
5. **Securing:** Tighten any retaining nuts or screws as required, ensuring a snug fit without over-tightening.
6. **Testing:** Slowly turn on the water supply and check for leaks. Operate the fixture to confirm proper function.

If you are unsure about any step, consult a qualified plumber.

## OPERATING THE SPINDLE

The Geberit Spindle (240.925.00.1) is an internal component that facilitates the opening and closing mechanism of a valve or tap when operated by a square key.

1. **Key Insertion:** Insert the appropriate square key into the spindle's square recess.
2. **Rotation:** Rotate the key clockwise or counter-clockwise to actuate the valve mechanism. The direction of rotation for opening or closing will depend on the specific fixture it is installed in.
3. **Gentle Operation:** Operate the key with gentle, firm pressure. Avoid excessive force, which can damage the spindle or the valve.

This spindle is a functional part and does not have user-facing controls beyond its interaction with a square key.

## MAINTENANCE

The Geberit Spindle (240.925.00.1) is designed for durability and typically requires minimal maintenance.

- **Regular Inspection:** Periodically check for any signs of wear, corrosion, or leakage around the spindle area.
- **Cleaning:** If accessible, clean any accumulated mineral deposits or debris from the spindle and its housing. Use mild cleaning agents and avoid abrasive materials.
- **Replacement:** If the spindle becomes stiff, leaks, or fails to operate correctly, it should be replaced with an original Geberit spare part (model 240.925.00.1).

Do not attempt to lubricate the spindle with unauthorized substances, as this may damage seals or affect performance.

## TROUBLESHOOTING

This section addresses common issues that may arise with the Geberit Spindle (240.925.00.1).

Problem	Possible Cause	Solution
Spindle is stiff or hard to turn	Mineral buildup or worn internal components	Clean the spindle and housing. If problem persists, replace the spindle.
Leakage around the spindle	Worn seals or improper installation	Check for proper seating and tightness. Replace seals or the entire spindle if necessary.
Valve does not open/close fully	Spindle damage or incorrect key	Ensure the correct square key is used. Inspect the spindle for damage and replace if found.

For issues not listed here, or if solutions do not resolve the problem, contact Geberit customer support or a qualified plumber.
