## 2. SAFETY INFORMATION

---

Please read all safety instructions carefully before installing and operating the smoke detector. Failure to follow these instructions may result in property damage, injury, or death.

- **Do not paint the smoke detector.** Paint can clog the sensing chamber and prevent the detector from operating correctly.
- **Do not disassemble the unit.** There are no user-serviceable parts inside.
- **Do not install near sources of combustion.** Avoid kitchens, garages, or areas with high humidity or dust, as these can cause nuisance alarms.
- **Test regularly.** Perform weekly tests to ensure the detector is functioning correctly.
- **Plan an escape route.** Ensure all occupants know what to do in case of a fire alarm.
- **This device is not a substitute for a fire suppression system.** It is an early warning device.

## 4. INSTALLATION (SETUP)

### 4.1 Choosing the Right Location

Proper placement of smoke detectors is crucial for effective fire detection. Install smoke detectors in all bedrooms, hallways leading to bedrooms, and on every level of your home, including the basement. For optimal protection, consider additional detectors in living rooms and other common areas.

Avoid installing detectors in:

- Kitchens, bathrooms, or garages where steam, cooking fumes, or exhaust can cause nuisance alarms.
- Near air vents, fans, or open windows where air currents might prevent smoke from reaching the detector.
- Within 1 meter (3 feet) of fluorescent lights.

#### Understanding Detector Types:

Image 4.2: Detector Type Guide

- **Smoke Alarms (Rauchwarnmelder):** React to smoke development and smoldering fires. Install in bedrooms, children's rooms, and hallways. Additionally recommended for living rooms and common areas.
- **Heat Alarms (Wärmewarnmelder):** React to temperatures above 58°C. Suitable for areas with high steam or dust, such as kitchens, bathrooms, and garages.
- **Carbon Monoxide Alarms (Kohlenmonoxidwarnmelder):** React to high CO levels in the air. For rooms where carbon-containing materials are burned (e.g., gas, coal, wood).

## 4.2 Mounting Instructions

1. **Prepare the Mounting Location:** Ensure the chosen location is clean and free from obstructions.
2. **Attach the Mounting Plate:** Use the provided screws and wall plugs to securely attach the mounting plate to the ceiling or wall. The mounting plate is designed to be compatible with existing drill holes for convenience.

3. **Activate the Detector:** Align the smoke detector with the mounting plate and twist it clockwise until it clicks into place. This action will automatically activate the integrated 10-year lithium battery.
4. **Perform Initial Test:** After mounting, press and hold the large test/hush button for a few seconds until the alarm sounds. This confirms the detector is functioning correctly.

## 5. OPERATION

---

### 5.1 Normal Operation

Once installed and activated, the Ei650 smoke detector operates continuously. It features a Silent Standby mode, meaning there are no distracting LED flashes during normal operation, making it suitable for bedrooms.

### 5.2 Test Function

Regular testing is essential to ensure your smoke detector is working. Press and hold the large test/hush button on the front of the detector for approximately 3-5 seconds. The alarm will sound, indicating that the detector's electronics, battery, and alarm horn are functioning. Release the button to stop the alarm.

### 5.3 Hush Function (Silence Nuisance Alarms)

If a nuisance alarm occurs (e.g., from cooking fumes), you can temporarily silence the alarm by pressing the large test/hush button. The alarm will be silenced for approximately 10 minutes. After this period, the detector will automatically reset to normal monitoring mode. If the smoke is still present, the alarm will sound again.

---

## 6. MAINTENANCE

### 6.1 Regular Testing

Test your smoke detector at least once a week to ensure it is operating correctly. Follow the steps outlined in Section 5.2.

## 6.2 Cleaning

Dust and debris can accumulate on the smoke detector and affect its performance. Clean your detector at least once a month:

- Gently vacuum the exterior of the detector using a soft brush attachment.
- Wipe the surface with a slightly damp cloth. Do not use cleaning sprays or solvents.

## 6.3 Battery Life

The Ei650 features an integrated 10-year lithium battery that is not user-replaceable. The detector is designed to operate for at least 10 years. After this period, the entire unit should be replaced. The detector will emit a low battery warning signal when it is nearing the end of its operational life.

## 7. TROUBLESHOOTING

---

If your Ei650 smoke detector is not functioning as expected, refer to the following common issues and solutions:

Problem	Possible Cause	Solution
Detector chirps periodically.	Low battery warning.	The integrated 10-year battery is nearing its end of life. Replace the entire smoke detector unit.
Nuisance alarm (false alarm).	Steam, cooking fumes, dust, or insects in the sensing chamber.	Press the hush button to silence the alarm temporarily. Clean the detector as described in Section 6.2. Relocate the detector if nuisance alarms persist due to environmental factors.
Detector does not alarm when tested.	Detector not activated, faulty unit, or end of life.	Ensure the detector is correctly twisted onto the mounting plate. If it still doesn't work, replace the unit.
