## RM Series RMC10664

# RM Series RMC10664 Remote Control User Manual

Dedicated Replacement Remote Control

## INTRODUCTION

---

This RM Series remote control is a dedicated replacement designed to operate all functions of the original RMC10664 remote control. It requires no programming; simply insert batteries, and it is ready for use. The remote control is assembled and checked in the UK.

It utilizes the latest remote control technology chipsets to ensure infrared codes precisely match the original remote control. Unlike generic replacements, all buttons on this RM Series remote are correctly labeled, eliminating the need to constantly refer to a manual for button functions.

## SETUP

---

### Battery Installation

1. Locate the battery compartment on the back of the remote control.
2. Slide the battery compartment cover downwards or press the latch and lift to open.
3. Insert two new AAA batteries, ensuring the positive (+) and negative (-) terminals align correctly with the markings inside the compartment.
4. Replace the battery compartment cover, sliding it back into place until it clicks securely.

The remote control is now ready for immediate use without any programming.

## MAINTENANCE

---

### Cleaning

To clean the remote control, use a soft, dry cloth. Do not use liquid cleaners, abrasive materials, or chemical solvents, as these can damage the remote's surface or internal components.

### Battery Care

- Replace batteries when the remote control's response becomes sluggish or stops working.
- Always replace both batteries at the same time with new ones of the same type (AAA).
- If the remote control will not be used for an extended period (e.g., one month or more), remove the batteries to prevent potential leakage and damage.
- Dispose of used batteries according to local regulations.

## TROUBLESHOOTING

---

### Remote Control Not Responding

- **Check Batteries:** Ensure batteries are inserted correctly with the positive (+) and negative (-) terminals aligned as indicated. Replace old batteries with new ones.
- **Line of Sight:** Verify there are no obstructions (e.g., furniture, other objects) between the remote control and the device's infrared receiver. The remote requires a clear line of sight.
- **Device Power:** Confirm that the device you are trying to control is powered on and functioning correctly.
- **Remote Indicator:** The remote control features a red LED indicator. If this indicator does not light up when a button is pressed, the batteries may be dead or incorrectly inserted.

### Intermittent Operation

- Weak batteries can cause intermittent operation. Replace them.
- Ensure you are within the effective operating range (up to 10 meters) and pointing the remote directly at the device.
