Box CONTENTS

Verify that all items listed below are included in your package:

- Sample Pad Pro
- Power Adapter
- User Manual
- Safety Instructions & Warranty Information

SETUP

Follow these steps to properly set up your Alesis SamplePad Pro.

1. Power Connection

Connect the included power adapter to the DC IN 9V/500mA port on the rear panel of the SamplePad Pro, then plug the adapter into a power outlet. Ensure the power switch is in the OFF position before connecting power.

2. Audio Connections

- **Main Outputs:** Connect the 1/4-inch MAIN OUT (L/MONO, R) jacks to your mixer, amplifier, or audio interface.
- **Headphone Output:** Connect 1/4-inch headphones to the PHONES jack for private monitoring. Adjust the volume using the dedicated PHONES volume knob.

- **Auxiliary Input:** Connect an external audio source (e.g., MP3 player, phone) to the 1/8-inch AUX IN jack to play along with external audio. Adjust the input level using the AUX IN VOL knob.

3. External Trigger Inputs

The SamplePad Pro supports additional triggers and pedals:

- **Kick Pedal:** Connect a kick drum trigger or switch pedal to the KICK input. This input supports both switch and trigger modes, selectable in the settings.
- **Hi-Hat Pedal:** Connect a hi-hat control pedal to the HI-HAT input. This input supports both switch and variable modes.
- **External Pads:** Connect up to two additional single or dual-zone drum pads to the PAD 1 and PAD 2 inputs.

4. MIDI and USB Connectivity

- **MIDI In/Out:** Use standard 5-pin MIDI cables to connect to external MIDI devices.
- **USB:** Connect the SamplePad Pro to your computer using a USB cable for MIDI communication and sample transfer.

5. SD Card Installation

To load custom samples and kits, insert an SD or SDHC card (up to 32GB, not included) into the SD CARD slot on the front left side of the unit. Ensure the card is formatted correctly (FAT32) for optimal performance.

Figure 2: Rear panel connections of the Alesis SamplePad Pro.

OPERATION

This section details the basic operation of your SamplePad Pro.

1. Powering On/Off

After connecting the power adapter, press the POWER button located on the rear panel to turn the unit on. To power off, press the POWER button again.

2. Basic Navigation

The SamplePad Pro features a backlit LCD display and navigation buttons (UP, DOWN, LEFT, RIGHT, OPTIONS, SAVE) to browse kits, select sounds, and adjust parameters. Use the arrow buttons to navigate menus and adjust values. The OPTIONS button accesses deeper settings, and SAVE stores your changes.

3. Playing Sounds

Strike the eight rubber pads to trigger sounds. The pads are velocity-sensitive, meaning the sound's dynamics will respond to how hard or soft you strike them. The blue LED illumination indicates pad activity.

4. Customizing Sounds and Kits

The SamplePad Pro comes with 10 preset drum kits and over 200 built-in sounds. You can customize these or create your own kits. Each sound offers individual access to parameters such as pitch, panning, and reverb. Refer to the full user guide for detailed instructions on sound editing.

5. Loading Custom Samples

With an SD card inserted, you can load up to 512 additional sounds and 89 custom kits. Connect the SamplePad Pro to your computer via USB to transfer WAV files to the SD card. The unit will then recognize these files for assignment to pads.

Figure 3: SamplePad Pro connected to a computer for sample management.

MAINTENANCE

Proper care ensures the longevity of your SamplePad Pro.

- **Cleaning:** Use a soft, dry cloth to clean the unit. Avoid abrasive cleaners or solvents.
- **Storage:** Store the SamplePad Pro in a cool, dry environment away from direct sunlight and extreme temperatures.
- **Pad Care:** The durable rubber pads are designed for regular use. Avoid excessive force or sharp objects that could damage the pad surfaces.

TROUBLESHOOTING

Here are solutions to common issues you might encounter:

- **No Sound:** Check power connection, volume levels (main, headphones, aux in), and audio cable connections. Ensure the correct kit is selected.
- **Pads Not Responding:** Verify the unit is powered on. Check pad sensitivity settings in the OPTIONS menu.
- **SD Card Read Error:** Ensure the SD card is properly inserted and formatted to FAT32. Try a different SD card (up to 32GB).
- **Crosstalk Between Pads:** Adjust pad sensitivity and threshold settings in the OPTIONS menu to minimize unintended triggering.
- **MIDI Connectivity Issues:** Ensure USB or MIDI cables are correctly connected. Check MIDI settings on both the SamplePad Pro and your computer/external device.
