TROUBLESHOOTING

Problem	Possible Cause	Solution
Frother does not turn on.	Not plugged in; power outage; appliance malfunction.	Ensure the power cord is securely plugged into a working outlet. Check circuit breaker. Contact customer support if issue persists.

Problem	Possible Cause	Solution
Milk is not frothing or heating properly.	Incorrect milk level; wrong whisk; old milk; type of milk.	Ensure milk is between MIN and appropriate MAX line. Verify correct whisk is installed. Use fresh, cold milk. Dairy milk (especially whole milk) generally froths best. Some non-dairy milks may not froth as effectively.
Milk overflows.	Too much milk added.	Do not exceed the MAX frothing (4.2oz/125ml) or MAX heating (8.4oz/250ml) lines.
Milk burns or sticks to the bottom.	Heating whisk not installed for heating; insufficient milk.	Ensure the heating whisk is used for heating milk without frothing. Always add milk above the MIN line. Clean immediately after use.
