3. KEY FEATURES

The Classic Wheel Stand offers several features designed for optimal performance and user convenience:

- **Adjustable Steering Wheel Deck:** The wheel deck can be adjusted for both height and angle, allowing users to find their ideal racing position.
- **Adjustable Pedal Plate:** The pedal plate offers angle and height adjustments to accommodate different pedal sets and user preferences.
- **Dual Shifter Mounts:** Includes two gear shifter mounts that can be installed on either the left or right side of the stand.
- **Sturdy Construction:** Built with a premium steel framework and a twin-spar design for enhanced rigidity and stability during intense racing sessions.
- **Compact Storage:** The stand features a foldable design, allowing for easy storage when not in use.
- **Upgradeable Design:** Can be upgraded to a full GT Omega racing cockpit for a more comprehensive setup.

4. SETUP

The GT Omega Classic Wheel Stand arrives largely pre-assembled. Final setup involves attaching your racing peripherals and adjusting the stand to your preferred ergonomic position.

4.1 Unpacking and Initial Assembly

1. Carefully remove all components from the packaging.
2. Unfold the main frame of the wheel stand. Ensure all locking mechanisms are securely engaged.
3. Adjust the leveling feet at the base of the stand to ensure stability on uneven surfaces.

4.2 Mounting Your Steering Wheel

1. Place your steering wheel onto the wheel deck.
2. Align the mounting holes on your steering wheel with the pre-drilled holes on the wheel deck.
3. Secure the steering wheel using the provided bolts and nuts, or the mounting clamps that came with your steering wheel. Ensure it is firmly attached.

4.3 Mounting Your Pedals

1. Position your pedal set onto the pedal plate at the base of the stand.
2. Align the mounting holes on your pedal set with the pre-drilled holes on the pedal plate.
3. Secure the pedal set using the provided hardware.

4.4 Mounting Your Gear Shifter (Optional)

1. Attach one of the gear shifter mounts to either the left or right side of the main frame using the designated bolts.
2. Place your gear shifter onto the mounted plate.
3. Align the mounting holes and secure the shifter using the appropriate hardware.

5. OPERATING AND ADJUSTMENTS

The Classic Wheel Stand offers multiple adjustment points to customize your racing setup for maximum comfort and performance.

5.1 Steering Wheel Deck Adjustment

The steering wheel deck can be adjusted for both height and angle. Loosen the adjustment knobs on the side supports of the wheel deck, set to your desired position, and then securely tighten the knobs.

6. MAINTENANCE

Regular maintenance ensures the longevity and optimal performance of your GT Omega Classic Wheel Stand.

- **Cleaning:** Wipe down the stand with a soft, damp cloth to remove dust and grime. Avoid abrasive cleaners or solvents that could damage the finish.
- **Check Fasteners:** Periodically check all bolts, screws, and adjustment knobs to ensure they are securely tightened. Loose fasteners can lead to instability or premature wear.
- **Storage:** When not in use, fold the stand and store it in a dry, cool place to protect it from environmental damage.

7. TROUBLESHOOTING

If you encounter issues with your GT Omega Classic Wheel Stand, refer to the following common solutions:

7.1 Stand Wobbles or is Unstable

- **Solution:** Ensure all assembly bolts and adjustment knobs are fully tightened. Check the leveling feet at the base and adjust them to compensate for uneven floor surfaces.

7.2 Peripherals Do Not Mount Correctly

- **Solution:** Verify that your specific model of steering wheel, pedals, or shifter is listed as compatible. Ensure you are using the correct mounting hardware (either supplied with the stand or with your peripheral). Some older or less common peripherals may require minor modifications or custom drilling, though the stand is pre-drilled for most major brands.

7.3 Difficulty Adjusting Height or Angle

- **Solution:** Loosen the adjustment knobs sufficiently before attempting to change the position. Do not force adjustments. If a knob is stuck, ensure no weight is resting on the component being adjusted.
