SETUP

1. **Unpacking:** Carefully remove the desktop computer and all accessories from the packaging. Retain the packaging for future transport or service.
2. **Connecting Peripherals:** Connect your monitor, keyboard, and mouse to the appropriate ports on the back of the desktop. Ensure all connections are secure. The desktop supports various connectivity options including USB, HDMI, and Wi-Fi.
3. **Power Connection:** Connect the power cable to the desktop's power supply unit and then to a grounded electrical outlet.
4. **Initial Power On:** Press the power button located on the front of the desktop. The system will begin the boot process. Follow any on-screen instructions for initial operating system setup.

OPERATING

Your CyberpowerPC Gamer Ultra GUA950A Desktop comes pre-installed with either Windows 7 Home Premium or Windows 8. Familiarize yourself with the operating system interface and its basic functions.

- **Power On/Off:** To power on, press the power button. To shut down, always use the operating system's shutdown function (Start Menu > Power > Shut down) to prevent data corruption. Avoid powering off directly by holding the power button unless absolutely necessary.
- **Connectivity:** Utilize the available USB ports for connecting external devices. HDMI is available for display output. Integrated Wi-Fi and Bluetooth provide wireless connectivity.

- **Optical Drive:** The system includes a 24X DVD+-RW drive for reading and writing optical media.

MAINTENANCE

Proper maintenance ensures the longevity and optimal performance of your desktop computer.

1. **Cleaning:** Regularly clean the exterior of the desktop with a soft, dry cloth. Use compressed air to clear dust from vents and fans to ensure proper airflow and prevent overheating. Do not use liquid cleaners directly on components.
2. **Software Updates:** Keep your operating system and drivers updated to ensure optimal performance, security, and compatibility. Check for updates regularly through the operating system settings.
3. **Data Backup:** Regularly back up important data to an external drive or cloud storage to prevent data loss in case of hardware failure or other unforeseen issues.

TROUBLESHOOTING

If you encounter issues with your desktop, refer to the following common troubleshooting steps:

- **No Power:** Ensure the power cable is securely connected to both the desktop's power supply unit and a functional electrical outlet. Verify the power outlet is working by plugging in another device.
- **No Display:** Check that the monitor is properly connected to the graphics card port (usually at the back, lower section of the desktop) and that the monitor itself is powered on. Try a different display cable or monitor if available.
- **System Slowdown:** Close unnecessary applications running in the background. Check for malware or viruses using reputable antivirus software. Ensure there is sufficient free space on your hard drive. Consider updating drivers for your components.
- **Peripheral Issues:** If a keyboard, mouse, or other USB device is not working, try connecting it to a different USB port. Ensure drivers for the peripheral are installed if required.

If these steps do not resolve the issue, please contact CyberpowerPC technical support for further assistance.
