K&F CONCEPT KF06.090

K&F Concept KF06.090 Lens Mount Adapter User Manual

Model: KF06.090

Brand: K&F Concept

Introduction

This manual provides instructions for the K&F Concept KF06.090 Lens Mount Adapter, designed to allow the use of Canon EOS (EF/EF-S) mount lenses on Micro Four Thirds (M4/3) mount cameras. This adapter facilitates the expansion of your lens options, enabling compatibility between different camera systems.
Key features of this adapter include:

- Smooth surface for effortless mounting and dismounting.
- Allows for infinity focus.
- Constructed from durable brass and anodized aluminum.
- Designed for full manual operation, as most Canon EF mount lenses do not feature a manual aperture ring.

Product Overview

The K&F Concept KF06.090 adapter is a precision-made accessory ensuring a secure fit between your Canon EF/EF-S lens and M4/3 camera body.

Setup

Attaching the Adapter to the Camera

1. Ensure both your camera and the adapter are clean and free of dust.
2. Align the red dot on the adapter with the red dot on your Micro Four Thirds camera body.
3. Insert the adapter into the camera mount and rotate it clockwise until it clicks securely into place.

Attaching the Lens to the Adapter

1. Align the red dot on your Canon EF/EF-S lens with the red dot on the mounted adapter.
2. Insert the lens into the adapter and rotate it clockwise until it clicks securely into place.

Important Considerations

- **Canon STM Series Lenses:** Canon STM series lenses are not compatible with this adapter.
- **Aperture Control:** Most Canon EF mount lenses are electronically controlled and do not feature a manual aperture ring. When used with this full manual operation adapter, the aperture cannot be transferred to the camera and will default to its smallest f-stop. To use a different aperture, you may need to set the desired aperture on a compatible Canon EOS camera body first, then carefully remove the lens and attach it to the adapter without changing the aperture setting.
- **Focal Length Magnification:** Adapting a full-frame lens to an M4/3 camera will magnify the focal length by 2.0x.

Camera Settings

To ensure proper operation, enable the "Shoot Without Lens" or equivalent setting in your Micro Four Thirds camera's menu. Refer to your camera's instruction manual for specific steps.

Operating the Adapter

Manual Focus

Since this is a manual adapter, all focusing must be performed manually using the focus ring on your attached Canon EF/EF-S lens. Utilize your camera's focus peaking or magnification features for precise focusing.

Image Stabilization

If your Canon EF/EF-S lens features optical image stabilization (IS), it will function normally when used with this adapter, provided the lens's IS switch is set to 'ON'.

Maintenance

- **Cleaning:** Use a clean, dry microfiber cloth to wipe the adapter. Avoid using harsh chemicals or abrasive materials.
- **Storage:** Store the adapter in a dry, dust-free environment when not in use. Keep both ends covered with caps to prevent dust and debris from entering.
- **Handling:** Handle the adapter with care to avoid dropping or impacting it, which could damage the precision mounts.

Troubleshooting

- **"No Lens Attached" Error:** If your camera displays a "No Lens Attached" error, ensure the "Shoot Without Lens" option is enabled in your camera's settings.
- **Aperture Stuck at Smallest f-stop:** This is expected behavior for electronically controlled EF lenses without a manual aperture ring. Refer to the "Important Considerations" section under Setup for a potential workaround.
- **Difficulty Mounting/Dismounting:** Ensure proper alignment of the red dots and avoid forcing the adapter or lens. If resistance is met, re-check alignment.
