SETUP AND INSTALLATION

Tools Recommended: Adjustable wrench, Phillips screwdriver, plumber's tape, basin wrench (optional), safety glasses, gloves.

1. **Prepare the Sink:** Ensure the sink hole is clean and free of debris. If replacing an old faucet, remove it and clean the area thoroughly.
2. **Install the Faucet Body:** Insert the faucet body into the sink hole. Ensure the base gasket is properly seated between the faucet and the sink surface.
3. **Secure the Faucet:** From underneath the sink, slide the rubber washer, then the metal washer, and finally the mounting nut onto the threaded shank of the faucet. Hand-tighten the nut, then use a basin wrench or adjustable wrench to secure it firmly, ensuring the faucet is straight.
4. **Connect Water Supply Lines:** Attach the flexible hot and cold water supply hoses to the corresponding inlets on the faucet body. Use plumber's tape on the threads for a watertight seal. Connect the other ends of the hoses to your hot and cold water supply valves. Tighten connections with an adjustable wrench, but do not overtighten.
5. **Check for Leaks:** Slowly turn on the main water supply. Check all connections for leaks. If any leaks are detected, tighten the connections slightly until the leak stops.

- **Flexible Spout:** The spout can be freely moved and positioned to direct water flow precisely where needed in the sink.

MAINTENANCE AND CLEANING

To maintain the appearance and functionality of your IMEX Verona GCE010 faucet, follow these cleaning guidelines:

- **Regular Cleaning:** Clean the faucet regularly with a soft cloth and mild soap or a non-abrasive liquid cleaner.
- **Avoid Harsh Chemicals:** Do not use abrasive cleaners, scouring pads, ammonia-based cleaners, or bleach, as these can damage the chrome finish.
- **Rinse and Dry:** After cleaning, rinse the faucet thoroughly with clean water and dry it with a soft cloth to prevent water spots.
- **Aerator Maintenance:** Periodically unscrew the aerator at the tip of the spout and clean any mineral deposits or debris that may restrict water flow.

TROUBLESHOOTING

If you encounter any issues with your faucet, refer to the following common problems and solutions:

- **Low Water Flow:**
 - Check if the water supply valves are fully open.
 - Clean the aerator for mineral buildup or debris.
 - Inspect the supply hoses for kinks.
- **Leaking from Faucet Base:**
 - Ensure the mounting nut under the sink is securely tightened.
 - Check if the base gasket is properly seated.
- **Dripping from Spout:**
 - This usually indicates a worn ceramic cartridge. Contact customer support for replacement parts or professional assistance.
- **Difficulty Adjusting Temperature:**

- Ensure both hot and cold water supply lines are connected correctly and valves are open.
