2. SETUP AND PREPARATION

Before operating your Wagner Opti-Stain sprayer, proper setup and material preparation are crucial for optimal results and to prevent clogging. Always ensure the work area is well-ventilated and wear appropriate personal protective equipment, including eye protection and gloves.

2.1. Assembly

1. **Attach the Material Container:** Securely twist the material container onto the sprayer body until it is hand-tight.
2. **Adjust the Suction Tube:** Ensure the suction tube is correctly positioned. For spraying downwards, angle the tube towards the front of the sprayer. For spraying upwards, angle it towards the rear.
3. **Connect Power:** Plug the sprayer into a grounded electrical outlet.

2.2. Material Preparation

The Opti-Stain sprayer is designed for thin materials. Always refer to the material manufacturer's instructions for thinning recommendations. If thinning is required, use the appropriate thinning agent (e.g., water for water-based materials, mineral spirits for oil-based materials) and mix thoroughly.

- **Strain Materials:** Always strain your staining or sealing material through a paint strainer to remove any lumps or debris that could clog the sprayer.
- **Fill Container:** Fill the material container, ensuring not to overfill. Leave some space for air.

3. OPERATING INSTRUCTIONS

Achieving a smooth, even finish requires understanding and utilizing the sprayer's adjustable settings.

3.1. Adjusting Spray Pattern

The sprayer features a three-position air cap that allows you to select the desired spray pattern:

- **Vertical Fan:** Ideal for horizontal surfaces or when moving the sprayer side-to-side.
- **Horizontal Fan:** Best for vertical surfaces or when moving the sprayer up and down.
- **Round Pattern:** Suitable for small areas, corners, or intricate details.

To change the pattern, simply rotate the air cap to align with the desired setting.

3.2. Adjusting Material Flow

The material flow control knob allows you to increase or decrease the material output. Turn the knob to find the optimal flow rate for your material and project, ensuring even coverage without runs or drips.

3.3. Spraying Technique

- Hold the sprayer approximately 6-8 inches from the surface.
- Move the sprayer in smooth, even strokes, overlapping each pass by about 50%.
- Release the trigger at the end of each stroke to avoid excessive material buildup.
- For best results, apply multiple thin coats rather than one thick coat.

4. CLEANING AND MAINTENANCE

Thorough cleaning after each use is essential to maintain the sprayer's performance and longevity.

1. **Empty Material:** Pour any remaining material back into its original container.
2. **Rinse Container:** Fill the material container with the appropriate cleaning solution (water for water-based materials, mineral spirits for oil-based materials).
3. **Spray Cleaning Solution:** Spray the cleaning solution through the sprayer until it runs clear.
4. **Disassemble and Clean:** Disassemble the nozzle, air cap, and suction tube. Clean all parts thoroughly with the cleaning solution and a brush.
5. **Wipe Down:** Wipe the exterior of the sprayer with a damp cloth.
6. **Dry and Store:** Allow all parts to dry completely before reassembling and storing the sprayer in a clean, dry place.
