7. TROUBLESHOOTING

Problem	Possible Cause	Solution
Charger indicator light does not illuminate.	No power to the charger.	Ensure the charger is securely plugged into a live 100V AC outlet. Check the circuit breaker.
Rapidly blinking red light.	Battery too hot or too cold, or faulty battery/charger.	Remove the battery and allow it to reach room temperature (20-25°C or 68-77°F). Reinsert the battery. If the issue persists, the battery or charger may require service.
Battery does not charge or charges slowly.	Battery is fully charged, battery is faulty, or charger is faulty.	Check the indicator light (slowly blinking red means fully charged). Try charging a different, known-good battery. If other batteries also fail to charge, the charger may be faulty.
