5. OPERATING INSTRUCTIONS

5.1. Using the Ceramic Hob

The ceramic hob features four heating zones, controlled by rotary knobs on the control panel. Each knob corresponds to a specific hob zone and allows you to adjust the heat intensity.

1. Place a suitable pan on the desired hob zone. Ensure the pan base is flat and covers the heating zone adequately.
2. Turn the corresponding control knob clockwise to the desired heat setting. The settings typically range from 1 (low) to 9 (high).
3. The hob surface will heat up. An indicator light may illuminate to show a zone is active or hot.
4. After cooking, turn the knob counter-clockwise to the '0' position to switch off the zone. The residual heat indicator will remain lit until the surface has cooled down.

5.2. Using the Electric Oven

The electric oven offers various cooking functions, selected via the oven function knob and temperature knob.

1. **Select Function:** Turn the oven function knob to choose the desired cooking mode (e.g., conventional heating, grill, fan-assisted).
2. **Set Temperature:** Turn the temperature knob to the required temperature for your recipe. The oven indicator light will illuminate, indicating that the oven is heating.
3. **Preheating:** Allow the oven to preheat to the set temperature before placing food inside. The indicator light will turn off when the temperature is reached.
4. **Cooking:** Carefully place food into the oven using oven mitts.
5. **Switch Off:** Once cooking is complete, turn both the function and temperature knobs to the '0' position.

Note: Specific oven functions and their symbols can be found in the detailed appliance diagram, usually located on the inside of the oven door or control panel.
