The QUNDA KT-DOT remote requires two AAA batteries for operation. Ensure correct polarity when inserting the batteries. Replace batteries when the remote's display becomes dim or unresponsive.

### 2.2. Programming the Remote (Code Search)

The remote can be programmed using either a manual code entry or an automatic search function.

#### Manual Code Entry:

1. Identify your air conditioner's brand from the provided code list in the manual.
2. Locate the corresponding 3-digit code(s) for your brand.
3. Press and hold the "SET" button on the remote until the code display flashes.
4. Enter the 3-digit code using the number buttons.
5. Point the remote at your AC unit and press the "POWER" button. If the AC unit responds, the code is correct.
6. If the AC unit does not respond, try the next code for your brand or use the auto search function.

#### Automatic Code Search:

1. Ensure your air conditioner is powered on.
2. Press and hold the "SET" button for approximately 5 seconds until the code on the LCD display starts flashing. The remote will begin transmitting codes automatically.
3. Point the remote at your AC unit. When the AC unit responds (e.g., turns on/off, changes mode), immediately press the "OK" button to confirm the code.
4. Test all functions of the remote to ensure full compatibility. If some functions do not work, repeat the auto search process to find a more suitable code.
