- Have a bucket or towel ready to catch any residual water.

3.2. Removing the Filter Housing:

2. Ensure the internal lugs of the wrench engage securely with the grooves on the filter housing sump.

4. Once loosened, you can typically unscrew the housing by hand.

3.3. Installing the Filter Housing:

5. TROUBLESHOOTING

Problem	Possible Cause	Solution
Wrench slips on housing.	Incorrect wrench size or lugs not fully engaged.	Ensure the wrench is correctly seated and the lugs align with the housing grooves. Verify compatibility with your filter housing model.

Problem	Possible Cause	Solution
Housing is too tight to loosen.	Housing overtightened previously or sealed by sediment.	Apply steady, firm pressure. Avoid sudden jerks. If extremely tight, ensure water pressure is fully relieved. Consider using a rubber mallet to gently tap the wrench handle for added leverage, but exercise caution to avoid damage.
Housing leaks after tightening.	O-ring improperly seated, damaged, or housing not tightened sufficiently.	Ensure the O-ring is clean, lubricated, and correctly seated in its groove. Hand-tighten the housing, then use the wrench for a final snug turn. Do not overtighten.
