3. SETUP

To begin using your Transcend 2GB SD Memory Card, follow these steps:

1. **Identify Compatible Device:** Ensure your device (e.g., digital camera, camcorder, card reader) supports Standard SD cards. This card is compatible with devices that accept SD (Secure Digital) format.

2. **Locate SD Card Slot:** Power off your device. Locate the SD card slot, typically found on the side or bottom of cameras and camcorders.

3. **Insert the Card:** Gently insert the SD card into the slot with the gold contacts facing down (or as indicated by your device's manual). Push until it clicks into place. Do not force the card.

4. **Lock Switch (Optional):** The SD card features a small lock switch on its side. Sliding this switch down (towards the 'Lock' position) write-protects the card, preventing accidental deletion or modification of data. Slide it up to enable writing. Ensure the switch is in the 'unlocked' position for normal operation.

5. **Power On Device:** Power on your device. The device should recognize the new memory card. You may be prompted to format the card if it's new or if you wish to erase all existing data.

4. OPERATING INSTRUCTIONS

Once the SD card is properly installed and recognized by your device, you can begin using it for data storage.

1. **Formatting the Card:** For first-time use or to clear all data, it is recommended to format the card using your device's menu. Refer to your device's manual for specific formatting instructions. Formatting erases all data and prepares the card for optimal performance with that specific device.

2. **Storing Data:** When taking photos, recording videos, or saving files, your device will automatically store them on the inserted SD card. Ensure sufficient space is available before starting a new recording session.

3. **Accessing Data:** To view or transfer data, you can either connect your device directly to a computer or remove the SD card and insert it into a compatible card reader connected to a computer.

4. **Data Transfer:** When transferring files to or from the card, ensure the process completes fully before disconnecting the card or device. Interrupting data transfer can lead to data corruption.

5. **Safe Removal:** Always safely eject the SD card from your computer's operating system before physically removing it from the card reader. For cameras or camcorders, ensure the device is

powered off before removing the card.

- **Physical Protection:** Avoid bending, dropping, or exposing the card to excessive force. Store it in a protective case when not in use.
- **Environmental Conditions:** Keep the card away from extreme temperatures, direct sunlight, moisture, and strong magnetic fields.
- **Cleaning:** If necessary, gently wipe the gold contacts with a clean, dry, lint-free cloth. Do not use abrasive materials or liquids.
- **Data Backup:** Regularly back up important data from your SD card to another storage medium (e.g., computer hard drive, cloud storage) to prevent data loss.
- **Write Protection:** Utilize the write-protect switch to safeguard important data from accidental deletion or overwriting.
