4. SETUP INSTRUCTIONS

The D-Link DES-1016A switch is designed for simple plug-and-play installation. Follow these steps to set up your switch:

1. **Placement:** Place the switch on a flat, stable surface or mount it in a suitable location. Ensure adequate ventilation around the device.
2. **Connect Network Devices:** Connect your network devices (e.g., computers, servers, network printers, other switches/routers) to any of the 16 RJ45 ports on the switch using standard Ethernet cables. The switch supports auto MDI/MDIX, so you do not need to worry about using crossover cables.
3. **Connect Power:** Connect the provided power adapter to the power input port on the rear of the switch, then plug the adapter into a standard electrical outlet.
4. **Verify Power:** Once connected, the power indicator LED on the front panel should illuminate, indicating the switch is receiving power.
5. **Verify Connections:** The corresponding port LEDs will illuminate when a device is successfully connected and active. A blinking LED indicates network activity.

Your D-Link DES-1016A switch is now ready for use.

5. OPERATING THE SWITCH

The DES-1016A is an unmanaged switch, meaning it operates automatically without requiring any configuration.

5.1 LED Indicators

The front panel LEDs provide status information for each port:

- **Power LED:** Illuminates when the switch is powered on.
- **Link/Act LEDs (for each port):**
 - *Solid Green:* Indicates a valid network connection at 100 Mbps.
 - *Solid Amber:* Indicates a valid network connection at 10 Mbps.
 - *Blinking:* Indicates network activity (data transmission/reception) on that port.
 - *Off:* No device is connected, or the connected device is powered off.

5.2 D-Link Green Technology

The DES-1016A incorporates D-Link Green Technology, which automatically detects link status and cable length to adjust power usage. This feature helps reduce energy consumption without compromising performance.

6. MAINTENANCE

The D-Link DES-1016A switch requires minimal maintenance.

- **Cleaning:** Use a soft, dry cloth to clean the exterior of the switch. Do not use liquid or aerosol cleaners.
- **Ventilation:** Ensure that the ventilation openings are not blocked to prevent overheating.
- **Power Cycle:** If the switch is unresponsive, disconnect the power adapter, wait 10 seconds, and then reconnect it.

7. TROUBLESHOOTING

If you experience issues with your D-Link DES-1016A switch, refer to the following common problems and solutions:

Problem	Possible Solution
No Power LED indication	<ul style="list-style-type: none">• Ensure the power adapter is securely connected to the switch and a working electrical outlet.• Verify the electrical outlet is functional by plugging in another device.
Port Link/Act LED is off	<ul style="list-style-type: none">• Check if the connected device is powered on and functioning correctly.• Ensure the Ethernet cable is securely connected to both the switch port and the device.• Try a different Ethernet cable.• Try connecting to a different port on the switch.
Slow network speed	<ul style="list-style-type: none">• Ensure all connected devices support Fast Ethernet (100 Mbps) for optimal performance.• Check for faulty or damaged Ethernet cables.• Verify that the connected devices are not experiencing issues.

If the problem persists after trying these solutions, please contact D-Link Technical Support.
