Linq 5-in-1 USB-C Pro Hub Instruction Manual

Model: LQ48014

INTRODUCTION

Thank you for choosing the Linq 5-in-1 USB-C Pro Hub. This versatile multiport adapter is designed to expand the connectivity of your USB-C enabled devices, including MacBooks, Windows PCs, iPads, and Chromebooks. It provides essential ports for video output, high-speed data transfer, and power delivery, enhancing your productivity and simplifying your workspace.

Please read this manual carefully to ensure proper installation, operation, and maintenance of your Linq 5-in-1 USB-C Pro Hub.

PRODUCT OVERVIEW

The Linq 5-in-1 USB-C Pro Hub transforms a single USB-C port into five essential connections:

- **1x HDMI 2.0 Port:** Supports 4K resolution at 60Hz for external displays.
- **1x USB-C Power Delivery Port:** Supports up to 100W Power Delivery for charging your host device.
- **1x USB-C Data Port:** SuperSpeed 10 Gbps for high-speed data transfer.
- **2x USB-A Data Ports:** SuperSpeed 10 Gbps for connecting peripherals and high-speed data transfer.

The hub features a durable, compact design with a braided cable for enhanced longevity and portability.

SETUP

1. **Connect to Host Device:** Plug the integrated USB-C cable of the Linq 5-in-1 USB-C Pro Hub into an available USB-C port on your MacBook, PC, iPad, or Chromebook. Ensure the USB-C port on your host device supports DisplayPort Alternate Mode (Alt Mode) and Power Delivery for full functionality.
2. **Power Connection (Optional):** For optimal performance and to charge your host device, connect your original USB-C power adapter to the USB-C Power Delivery (PD) port on the hub. The hub supports up to 100W Power Delivery.
3. **Connect Peripherals:**
 - **HDMI Display:** Connect an HDMI cable from your monitor or TV to the HDMI port on the hub. Your host device should automatically detect the external display.
 - **USB Devices:** Plug your USB-A or USB-C peripherals (e.g., external hard drives, flash drives, keyboards, mice) into the corresponding USB-A or USB-C data ports on the hub.

The hub is plug-and-play and typically does not require any driver installation.

OPERATING INSTRUCTIONS

Using the HDMI Port

Connect an HDMI-enabled display to the hub's HDMI port. Your device should automatically extend or mirror your display. You may need to adjust display settings in your operating system (e.g., System Preferences on macOS, Display Settings on Windows) to configure resolution, refresh rate, and display arrangement.

Note:

- Ensure your host device's USB-C port supports DisplayPort Alt Mode. Not all USB-C ports support video output.
- For 4K@60Hz output, ensure your display, HDMI cable, and host device all support this resolution and refresh rate.

Using the USB-C Power Delivery Port

Connect your device's original USB-C power adapter to this port to charge your host device while using the hub. This port is for power input only and does not support data transfer.

Using the USB-A and USB-C Data Ports

Plug in your USB-A and USB-C peripherals. These ports support SuperSpeed 10 Gbps data transfer, allowing for quick transfer of large files. They are backward compatible with USB 2.0 and USB 3.0 devices, but data transfer speeds will be limited by the connected device's capabilities.

MAINTENANCE

- Keep the hub clean by wiping it with a soft, dry cloth. Avoid using liquid cleaners or solvents.
- Do not expose the hub to extreme temperatures, humidity, or direct sunlight.
- Avoid dropping or subjecting the hub to strong impacts.
- Store the hub in a cool, dry place when not in use.

TROUBLESHOOTING

No Display Output via HDMI

- Ensure your host device's USB-C port supports DisplayPort Alt Mode. Not all USB-C ports support video output.
- Check all cable connections (USB-C to host, HDMI to display).
- Try a different HDMI cable or display.
- Restart your host device.
- Verify display settings on your host device.

USB Devices Not Recognized

- Ensure the hub is securely connected to your host device.
- Try connecting the USB device directly to your host device to confirm it's working.
- If connecting a high-power device (e.g., external HDD), ensure the hub is connected to a power source via its PD port.
- Try a different USB port on the hub.

Host Device Not Charging

- Ensure your original USB-C power adapter is connected to the hub's USB-C PD port.
- Verify that your host device's USB-C port supports Power Delivery.

- Check the power adapter and cable for any damage.

Hub Feels Warm During Use

It is normal for the hub to become warm during operation, especially when multiple ports are in use or when charging a device. If it becomes excessively hot, disconnect it and contact support.
